CONNECT WITH US

ALL INTERNATIONAL CUSTOMERS

(Outside of North America, Europe or India) Please contact Stoelting's North American office for assistance.

SALES INQUIRIES

Please contact our Sales Department at Stoelting with Neuroscience or ANY-maze related sales inquiries.

TECHNICAL ASSISTANCE

Neuroscience

Please contact our Neuroscience Technical Staff at Neuro@StoeltingCo.com for technical assistance.

ANY-maze

Please contact ANY-maze Technical Support at TechSupport@ANY-maze.com for technical assistance.

ORDERS

Orders may be placed by phone, fax, e-mail (orders@StoeltingCo.com) or through our website at www.StoeltingCo.com. For orders placed in the U.S., Canada and Mexico, please address your order to Stoelting Headquarters located in Wood Dale, IL.

For orders placed in Europe, please address your order to Stoelting Europe.

For orders placed in India, please address your order to Stoelting India.

All International orders (outside of North America, Europe and India) please contact our North American office for further assistance. Payments can be made using a credit card (Visa, Mastercard, American Express), bank transfer or purchase order (PO; pre-approved accounts only).

RETURNS AND REPAIRS

Please contact our Returns Department at Stoelting for assistance with your return/repair. All returned items must be assigned a Return Materials Authorization (RMA) and be accompanied by a completed Equipment Decontamination form. Any merchandise that has not been assigned an RMA or does not include the Equipment Decontamination form will be returned to the sender. A restocking fee may be applied to all returned merchandise at the discretion of Stoelting Co. Customized equipment is not eligible for return.

WARRANTY INFORMATION

Stoelting Co. warrants its products against defects in materials and workmanship for a period of one-year from the date of shipment. For warranty repairs, please include a copy of your original invoice. Following inspection, you will be contacted with a repair estimate prior to initiation of the repair. Repair costs can be paid by VISA, MASTERCARD, AMEX, bank transfer or purchase order (PO; pre-approved accounts only).

**Prices and product availability subject to change without notice. Call or visit www.StoeltingCo.com for current prices.*

We thank you for your interest in Stoelting products, and look forward to serving you today, and in the years to come.

Rat and Mouse Stereotaxic Instruments

New Standard™ Stereotaxic Instrument for Rat and Mouse

The innovative design of the New Standard™ Stereotaxic Instrument provides users with the ability to perform surgeries on a Mouse or a Rat on the same base. The New Standard™ includes a 100 micron 3-axes, left-hand manipulator arm, separate rat and mouse adaptors, dual-sided (traditional and non-rupture) rat ear bars, dual-sided mouse ear bars, and corner-clamp probe holder. Also, available as Dual, Ultra-Precise, Digital or Motorized.

New Standard™ Features

- No U-Frame maximizes operating space
- Designed for a Rat or a Mouse on the same base
- Vertical and horizontal adjustment of ear and nose posts accommodates rodents of all sizes
- Scales at ear and nose posts allows for precise positioning
- Comes standard with integrated warming base!

**Equipped with
Warming Base!**

See pages 38-39

Rat Stereotaxic Instruments

Classic Lab Standard™ Stereotaxic Instruments for Rats

The Classic Lab Standard™ Stereotaxic Instrument has been a standard in research labs for nearly five decades. The time-proven U-Frame design provides stability and adaptability while the instrument's exclusive, triple-lead screws allow for smooth, consistent movements with rapid positioning. The Classic Lab Standard™ includes a 100 micron, 3-axes, left-hand manipulator arm, rat adaptor, traditional (18°) ear bars, and corner-clamp probe holder. Also available as Dual, Ultra-Precise, Digital, Ultra-Precise Digital, or Motorized.

Lab Standard™ Features

- Low cost
- Classic U-Frame design
- Interchangeable adaptors (for Mice or Rats)
- Gas anesthesia compatible
- Absolute lock at 90° vertical
- **Comes standard with integrated warming base!**

The classic **U-frame** design has been a **standard in research labs** for nearly five decades!

Mouse Stereotaxic Instruments

Just for Mouse™ Stereotaxic Instruments for Mice

The Stoelting Just For Mouse™ Stereotaxic Instrument was specifically designed for use with knock-out and transgenic mice. Includes a 10 x 10in (25 x 25cm) square base; 100 micron; 3-axes; left-hand manipulator arm; triple-point mouse and ear bars; snout clamp, and corner clamp probe holder. Also, available as Dual, Ultra-Precise, Digital, Digital Ultra-Precise, or Motorized.

Just for Mouse™ Features:

- Dual-arm capable
- Small footprint
- Compact and cost-effective
- Ideal for knock-out and transgenic mice
- Offers multiple head-holding options
- Vertical post adjustment
- Gas anesthesia compatible
(see product 51609M on page 28)
- Comes standard with integrated warming base

Motorized Stereotaxic Manipulator Arms

NEW!

Stoelting's Motorized Stereotaxic Manipulator Arms

Stoelting's Motorized Stereotaxic Manipulator Arms are designed for fast, accurate positioning during stereotaxic surgery. Ideal for inexperienced users, the motorized manipulator arms employ a touchscreen display for easy-to-control movement of each axis. Manual movement available anytime. Optional Drill feature available.

Motorized Manipulator Arm Features:

- Automatic motorized movement using touchscreen display
- Various speeds (4mm/s to 0.1mm/s)
- Manual option always available
- Optional Drill feature
- 1µm movement

51600M Motorized Lab Standard™ Stereotaxic Instrument shown with optional Drill, not included.

Equipped with Warming Base!
See pages 38-39

Stereotaxic Upgrades & Conversions

Digital Conversion

- Zeroing function at reference point
- 10-micron digital scale
- Increased repeatability

You should consider an upgrade if you currently own a standard model stereotaxic. We can upgrade most major stereotaxic brands. Upgrading your existing stereotaxic to a digital model will reduce the risk of human error, and increase accuracy (10- rather than 100-micron resolution). The large LED display is also useful for surgeries performed in low light, or constrained environments where reading the vernier scale is difficult.

DIGITAL CONVERSION

51914	Conversion to Digital, 3-axes, Left	\$2,995.00
51916	Conversion to Digital, 3-axes, Right	\$2,995.00

Motorized Conversion

Stoelting's Motorized Stereotaxic Manipulator Arms are designed for fast, accurate positioning during stereotaxic surgery. Ideal for inexperienced users, the motorized manipulator arms employ a touchscreen display for easy-to-control movement of each axis. Manual movement available anytime. Optional Drill feature available.

Motorized Manipulator Arm Features:

- Automatic motorized movement using touchscreen display
- Various speeds (4mm/s to 0.1mm/s)
- Manual option always available
- Optional Drill feature
- 1µm movement

MOTORIZED CONVERSION

51604M	Conversion to Motorized, 3-axes, Left	\$5,995.00
---------------	---------------------------------------	-------------------

Keep your Stereotaxic Base and upgrade with new Motorized Axes!

Stereotaxic Care and Maintenance

- Wipe your stereotaxic instrument with soap or a mild detergent.
- Keep your stereotaxic instrument free of dust and debris.
- Never autoclave your stereotaxic instrument.
- Sterilize your stereotaxic instrument using gas or a germicide if necessary.
- Stereotaxic instruments perform best at room temperature 70° - 75° F (20° - 24° C), and at 45-60% humidity.
- **Call for details about calibration service!**

Ultra-Precise Stereotaxic Manipulator Arms

Ultra-Precise Manipulator Arms

Ultra-Precise Manipulator Arms are ideal for use in stereotaxic surgery where high-accuracy positioning is required. Up to 80mm of travel is available in all directions, with up to 90° angle adjustment, in either the anterior-posterior or medial-lateral planes. Ultra-Precise Manipulators are compatible with all Stoelting Stereotaxics including New Standard™, Lab Standard™, and Just for Mouse™.

Ultra-Precise Features:

- 10-micron resolution
- Target small brain regions with confidence
- Upgrade ANY Stoelting Stereotaxic and most other stereotaxic brands

**Extremely high
accuracy...Precision
like no other!

Upgrading increases resolution.

Robotic Stereotaxic Instruments

Neurostar Robot Stereotaxic Instruments

Stoelting, the leading manufacturer in stereotaxic equipment and Neurostar, the pioneers in robot stereotaxic solutions for animal research, have teamed up to produce the best robotic stereotaxic systems on the market! The robotic systems are ideal for both new and experienced users.

Features include:

- StereoDrive software (computer not included)
- Atlas integration (Rat or Mouse)
- Motorized movement, computer controlled
- Correction for alignment inaccuracies (tilt correction)
- Correction for variation of brain size
- Auto-calculated angle adjustment
- 1 micron precision

configurations.

Drill and Microinjection Robot

The Drill and Microinjection Robot provides automated drilling followed by an intracranial injection using the same holder! This unique robotic stereotaxic is ideal for multiple injection sites with no tool exchange between the drill and injector.

Microinjection Features Include:

- Integrated into the StereoDrive software (computer not included)
- Define/Store protocols
- Also available as Glass-Capillary Nanoinjector (page 20)
- Atlas integration

Drill Features Include:

- Integrated into the StereoDrive software
- Depth controlled for safe drilling
- Auto stop function – automated dura detection avoids brain damage
- Atlas integration

Drill and Injection Robot Features include:

- All the above plus **NO TOOL EXCHANGE!**
- Software synchronization of Drill and Microinjector
- High throughput for drill and inject.
- Time saving and accurate.
- Automated sequencing for multiple injection sites – just program it and it does the work!

Compatible
with Stoelting's
Stereotaxic
Instruments!

Robotic Stereotaxic Accessories

Glass-Capillary Nanoinjector

The Glass-capillary Nanoinjector was specially designed to perform accurate ultraprecise nanoliter volume injections using glass capillaries that can be pulled to ultrathin tips. Wireless solution available.

In combination with the automated drill it can be used in the Drill and Nanoinjection Robot configuration.

Features include:

- Computer controlled, intuitive interface
- User defined injection volumes, starting from 1nL
- User defined injection rates, starting from 2nL/s
- Can be mounted on micromanipulators/stereotaxic
- Automated sequencing for multiple injection sites—just program it and it does the work!

58646	Capillary Nanoinjector (wireless for micromanipulators)	\$6,595.00

NEW! Smart BregmaFinder

Breakthrough innovation provides automated camera-driven zero-positioning of the probe over Bregma. The Smart BregmaFinder controls the robotic stereotaxic in order to precisely position the tip of the probe to Bregma.

Features include:

- Easy Bregma Detection
- Camera –Driven Positioning
- Experiment Monitoring
- Video Streaming
- Highest Accuracy

SMART BREGMAFINDER

58635	Smart BregmaFinder	\$6,995.00

Large Animal Stereotaxic Instruments

Parallel Rail Stereotaxic Instrument

Stoelting's Parallel Rail Stereotaxic Instrument is designed for large animals, but can be used on almost any laboratory animal with Stoelting's selection of animal species adaptors (page 26). Includes Parallel Rail frame; cat/monkey or dog/monkey adaptor; four 100 micron 2-axes manipulator arms (2 right-hand, 2 left-hand); traditional (18°) ear bars; swivel stand; base plate, and four corner-clamp probe holders.

Platform base allows for off-table vertical adjustment.

Parallel Rail Features

- Durable 2-axes positioning manipulator arms
- A/P microdrive available for increased resolution
- Adaptable for use with Rats and Mice

Parallel Rail is the MOST versatile stereotaxic instrument available!

PARALLEL RAIL STEREOTAXIC INSTRUMENT

51800	Parallel Rail Instrument, Cat/Monkey Adaptor, 4 manipulators	\$10,995.00
51804	Manipulator on Rail Clamp, Left	\$2,295.00
51806	Manipulator on Rail Clamp, Right	\$2,295.00
51858	A/P Microdrive	\$2,495.00

Traditional (18°) ear bars included. Non-Puncture (45°) ear bars available upon request.

51800 Parallel Rail Stereotaxic Instrument (shown with optional A/P Microdrive)

NEW!

Lab Standard with Mouse Adaptor

Position easily and secure your animal gently

Stoelting's Mouse/Neonates Adaptor is designed for use with the traditional 'U' frame Stereotaxic instrument. It employs light, has Delrin Ear Bars with tapered points on one end, and rubber tips on the other, to facilitate surgery on mice and rat pups.

The NEW Stoelting Mouse Adaptor Kit (page 24) uses a more traditional low profile hold for the head and snout of the mouse. Non-Rupture (45°) Ear Bars are included. The 51625-1 Elevated Platform with warming pad is ideal for this adaptor.

LAB STANDARD WITH MOUSE & RAT ADAPTORS

51615	Digital Lab Standard with Mouse & Neonates Adaptor	\$4,495.00
51615T	Lab Standard Stereotaxic, Mouse	\$4,495.00
51925	Digital Lab Standard with Mouse & Neonates Adaptor	\$6,495.00
51925T	Digital Lab Standard Stereotaxic, Mouse	\$6,495.00
51625-1	Elevated Platform for Mouse with Warming Pad	\$395.00
51625W	Mouse & Neonates Adaptor with Warming Pad	\$1,295.00

Add a **Rodent Warmer Control Box** to **utilize your Adaptors' warming feature!** See Rodent Warmer Control Box options on pages 38-39.

Stereotaxic Animal Adaptors

Transform your stereotaxic frame using our species-specific adaptors!

All adaptors are available for use with Parallel Rail Stereotaxic Instrument!

51660-1 Mouse Adaptor Kit

Mouse Adaptor Kit

The Stoelting 51660-1 Mouse Adaptor Kit includes a nose clamp assembly with small tooth bar for easy placement. Non-Rupture (45°) Ear Bars are included. The 51625-1 Elevated Platform is ideal for this adaptor and has a built-in warming pad.

51660-1	Mouse Adaptor Kit, (45°) Ear Bars	\$795.00
51625-1	Elevated Platform for Mouse Lab Standard	\$395.00

51621 Rat Adaptor

Rat Adaptor Kit

The 51621 Rat Adaptor Kit is included with all Lab Standard™ Stereotaxic Instruments for rats. The nose clamp assembly and either standard Traditional (18°) Ear Bars, or Non-Rupture (45°) Ear Bars are included.

51621	Rat Adaptor, Traditional (18°) Ear Bars	\$595.00
51620	Rat Adaptor, Non-Rupture (45°) Ear Bars	\$595.00

51622 Guinea Pig Adaptor

Guinea Pig Adaptor Kit

The Guinea Pig Adaptor includes the Non-Rupture (45°) ear bars required for guinea pigs. Also, the nose clamp reaches further back behind the incisors than on the rat adaptors. Compatible with all Lab Standard™ Stereotaxic Instruments.

51622	Guinea Pig Adaptor, Non-Rupture (45°) Ear Bars	\$595.00
--------------	--	-----------------

51623 Small Bird Adaptor

Small Bird Adaptor Kit

The Small Bird Adaptor Kit includes Non-Rupture (45°) Ear Bars, a beak support and "V" shaped beak clamp to secure the beak in place.

51623	Small Bird Adaptor, Non-Rupture (45°) Ear Bars	\$595.00
--------------	--	-----------------

51852 Dog/Monkey Adaptor

Large Animal Adaptor Kits

The Dog/Monkey Adaptor is available only for the 51800 series stereotaxic instruments. Includes one set of Traditional (18°) Ear Bars.

51852	Dog/Monkey Adaptor, Traditional (18°) Ear Bars	\$1,295.00
51826	Cat/Monkey Adaptor, Traditional (18°) Ear Bars	\$595.00

51678 Marmoset Adaptor Kit for 51600

Marmoset Adaptor

The Marmoset Adaptor holds the marmoset head by means of a vertically adjustable palate bar with infra-orbital bars. The ear bars are Non-Rupture (45°) to prevent rotation of the head.

51678	Marmoset Adaptor, Non-Rupture (45°) Ear Bars	\$595.00
--------------	--	-----------------

Mouse & Neonates Adaptor

Stoelting's Mouse/Neonatal Rat Adaptor transforms the Lab Standard™ stereotaxic for rats into an instrument equipped for mouse and rat pup surgeries.

Model organisms with soft skulls, such as the mouse and the neonatal rat, are difficult to secure firmly in a traditional stereotaxic instrument. The stainless steel ear bars used for adult rats are too heavy to provide a secure hold without compressing the sides of the auditory canal into which to insert the ear bars.

Stoelting's Mouse and Neonatal Rat Adaptor employs light, Delrin® ear bars with tapered points on one end, and rubber tips on the other, to facilitate surgery on mice and rat pups.

Ear bars' height can also be independently adjusted in height to easily level the skull. Laser engraved scales show the vertical positions of the ear bars. A tooth bar and nose clamp secures the nose.

"Triple point" securing of the animal's head in this adaptor makes it the most versatile mouse adaptor available. Set of two jaw holder cuffs included.

51625 Mouse/Neonatal Adaptor*

*Ideal for Neonatal Hypothermia Anesthesia

51625W Mouse/Neonates Adaptor with Warming Pad

51625-1 Elevated Platform for Mouse Lab Standard with Warming Pad

51625-2 Mouse and Neonates Adaptor with Warming Pad

MOUSE AND NEONATES ADAPTOR

51625	Mouse and Neonates Adaptor	\$1,395.00
51625W	Mouse and Neonates Adaptor with Warming Pad	\$1,395.00
51625-1	Elevated Platform for Mouse Lab Standard	\$395.00
51625-2	Microscope Platform for Mouse and Neonates	\$595.00

See ear bar options on page 31.

Stoelting Spinal Cord Surgery Adaptors

Stoelting's Spinal Cord Adaptors utilize the manipulator and base plate of the U-frame stereotaxic instrument, enabling precise spinal preparations. The spinal column is secured by up to four, independent transverse process clamps, as well as a spinous process clamp.

Different sizes for Mouse or Rat!

Spinal Cord Surgery Adaptor Features

- For precise spinal surgery applications

STOELTING SPINAL CORD SURGERY ADAPTORS

51695	Rat Spinal Adaptor	\$2,095.00
51690	Mouse Spinal Adaptor	\$2,095.00

Versatile and economical instrument for stabilizing the spinal column.

51695 Rat Spinal Adaptor

Stereotaxic Probe Holders

The **51631 Corner Clamp** is included in the purchase of every stereotaxic frame or manipulator arm!

Probe Holders

Each Probe Holder has an 11mm square acrylic block, with grooves spaced 1 mm apart.

STANDARD PROBE HOLDERS		
51631	Holder with Corner Clamp	\$295.00
51682	Horizontal Probe Holder, 90° (with Corner Clamp)* <i>*Not Shown</i>	\$250.00
51632	Holder with Side Clamp	\$295.00
51634	Holder with "C" Clamp	\$295.00

The Large Probe Holder is compatible with shaft diameters from 6.5-13 mm (0.5 inch). This will hold Hamilton™ Micro-syringes or Stereotaxic Drills. The Extra-Large Drill Holder holds 51449 Micromotor Drill (see page 30) or 13-26 mm (one inch) shafts.

LARGE PROBE HOLDERS		
51633	Syringe Holder	\$295.00
51630	Drill Holder for 51449	\$395.00
51630-1	Drill Holder for 51555 (See page 30)	\$395.00

The Microdialysis Probe Holder is customized, at Stoelting, to your specification. The hole may be drilled to fit probes from 1.5 to 6.0 mm. Default size is 1.5mm. Please call or email for details.

MICRODIALYSIS PROBE HOLDER		
51637	Microdialysis Probe Holder	\$350.00

CANNULA HOLDERS		
51636	Cannula Holder, Vertical	\$395.00
51636-1	Cannula Holder, Horizontal	\$495.00
51636-2	Cannula Holder for CMA 7, 11, and 12 Guide	\$495.00

The Double-Head Large Probe Holder has a large "C" gripping component at each end, with the "V" clamp attachment. Dual heads allow a secure hold for two different components. Clamps ¼"-½" (6.4 mm-12.7 mm) diameter.

DOUBLE-HEAD LARGE PROBE HOLDER		
51638	Double-Head Large Probe Holder	\$450.00

Probe and Syringe Holders **designed to use with any Stoelting Stereotaxic Manipulator Arm.**

Cannula Holders hold 3.4 mm Cannula Heads, as manufactured by Plastics One™, for cannula sets, and ALZET® Osmotic Pumps.

Probe Holder Features:

- Allows vertical adjustment
- Mount to right- or left-hand micromanipulator
- Compatible with most brands of stereotaxic manipulators

Gas Anesthesia Masks

Gas Anesthesia Mouse

The Gas Anesthesia Mouse Mask provides for precise and secure positioning of an animal during anesthesia and surgery. The mask provides positioning of the animal head that is perfect, automatic and effortless! For use with Mouse Stereotaxic Instruments (pages 12-13) and Mouse/Neonatal Rat Adaptor (pages 23-25). *We recommend this be used with a gas scavenger device.*

GAS ANESTHESIA PLATFORM/MOUSE

51609M	Gas Anesthesia Mouse Mask	\$395.00
---------------	---------------------------	-----------------

Gas Anesthesia for Mouse and Rat

Stoelting's Gas Anesthesia Adapter for Mouse and Rat provides an easy solution for gas delivery to a mouse or rat while still holding the animals head firmly for stereotaxic surgery. This items can be used with most mouse and rat adaptors associated with the Stoelting Lab Standard and Stoelting New Standard Stereotaxic Instruments.

We recommend this item be used with a gas scavenger device.

GAS ANESTHESIA FOR MOUSE AND RAT

51509	Gas Anesthesia Adapter for Mouse and Rat	\$495.00
51610	Gas Anesthesia Mask, Rat	\$225.00

Surgical Drills

Micromotor Drill

Allows for a slender profile and easy hand-grip.

This high-speed, Micromotor Drill (up to 38,000 RPM) is configured for stereotaxic surgery, particularly in soft-skull animals, such as neonatal rats and mice. The compact control includes switches for Power On/Off, Forward or Reverse Rotation, with Manual or Foot Speed Control. Speed can be adjusted from low, to full speed, using the dial on the box; or with the foot pedal. Miniature Carbide Drill Bit Kit included (51448).

**High RPMs
ideal for Mice and
Neonatal Rats!**

Portable Micro Motor Drill

- 0-30,000 RPM
- Lightweight hand piece
- Lithium Ion rechargeable battery
- Drill bits included

The Portable Micro Motor High-Speed Drill is the ideal choice for stereotaxic drills. Equipped with a light-weight hand piece and pocket size control unit, the micro motor drill provides maximum portability for a variety of applications. Control unit features a digital rpm display and dial speed control for easy monitoring as you work. Speed adjustment up to 30,000 RPM. Run time is approximately 5 hours when unit is fully charged. *Optional Carrying Case and Nylon Carrying Pouch available online.* Miniature Carbide Drill Bit Kit included (51448).

Flexible Shaft Drill

- Reliable performance
- Low vibration and noise
- Hands-free operation

A Lab Standard™ drill for over 25 years. The powerful motor and flexible shaft offer very low vibration and noise for long-term, reliable performance. The motor may be suspended from the optional 58652 Motor Support with Table Clamp. The heavy metal foot pedal allows exact speed control, and does not slide away from your foot. The drill includes motor, foot pedal, 1/2" handpiece with 3/32" collet, standard for dental drill bits, and a wrench for changing the collet. Miniature Carbide Drill Bit Kit included (51448).

FLEXIBLE SHAFT DRILL

58650	Flexible Shaft Drill	\$495.00
58652	Motor Support with Table Clamp	\$75.00
51633	Large Probe Holder*	\$295.00

*Required to mount drill to stereotaxic instrument. See page 27

Cordless Rechargeable Micro Drill

- Designed for balance and control
- No special tools required
- Up to 8 hours on a single charge

The Cordless Micro Drill is designed for research applications that require surgical drilling. Made of lightweight aluminum alloy for balance and control, the Micro Drill is powered by a rechargeable 6-volt nickel cadmium battery, and can function for up to 8 hours under normal operating conditions. Speed is 14,400 RPM. Drill comes with a hard plastic case with die-cut foam for convenient storage, a recharger, and 5 carbide steel burs.

Quintessential Stereotaxic Injector (QSI™)

Stoelting Quintessential Stereotaxic Injector (QSI™)

Control one or two independent injections with Stoelting's latest QSI Stereotaxic Injector. Automatic infusion or withdrawal of nL- μ L volumes. Program injection parameters (volume, rate and syringe specifications) using the easy-to-use touch screen control box. Accommodates Hamilton syringes sized 0.5uL-250uL. Available as a single or dual injector. If purchased as a single injector, add a second injector at any time.

QSI™ Features:

- Easy-to-use Touch Screen Control Box
- Control Single or Dual Injections
- Preprogrammed Syringe Specifications
- Out-of-range warnings

***Stereotaxic Instrument sold separately**

QUINTESSENTIAL STEREOTAXIC INJECTOR

53311	Quintessential Stereotaxic Injector (QSI)™, Single*	\$2,795.00
53312	Quintessential Stereotaxic Injector (QSI)™, Dual*	\$3,795.00
53316	Injector Head, Extra	\$1,295.00

QSI-2 and Manual Stereotaxic Injector

*Stereotaxic Instrument sold separately

- Micrometer graduated in .01mm increments
- Easy thumb-and-finger-control knob for precise injections
- Locking clamp to hold position
- Luer Lock for easy connection of most syringes
- Secure and gentle hold of glass microsyringes

Stoelting Manual Stereotaxic Injector

Stoelting's Manual Stereotaxic Injector provides an economical means of injecting or withdrawing a calibrated volume with simple, precise manual control. The injector has a universal adaptor for all Hamilton syringes, ranging from 0.5 to 250µl sizes and enables a wide range of volumes to be delivered. Includes Holder for mounting to Stereotaxic Instrument.

Manual Injector Features:

- Infusion/Withdrawal of nanoliter volumes
- Mounts directly to stereotaxic frame

Microsyringes

Permanent Needle

Removable Needle

Luer-tip

Hamilton microsyringes are made in the U.S.A. using state-of-the-art technology and the finest glass. Please visit our website StoeltingCo.com for additional syringes.

Syringes have removable or permanent needles included with either a 22° point (sharp) or no point (blunt). Luer-tip ends have no needle included.

Economical Micro-Volume Syringes

Tight tolerances between the plunger and the barrel. For use with liquids.

NEEDLE	5μL (26G)	10μL (26G)	25μL (22G)	50μL (22G)	100μL	250μL	500μL

Neuros Syringe

Hamilton Neuros™ syringe provides unprecedented functionality for controlled animal injections. An industry first, the Neuros accurately dispenses 50 nL to 100 µL of liquid through an ultra-fine blunt point needle that delivers the sample directly into the injection site.

Developed specifically for the neurosciences, the Neuros minimizes injection site damage by increasing needle rigidity and delivering a microvolume of liquid to an exact location.

- Benefits of the Neuros Design:**
- Needle rigidity improves insertion path accuracy
 - Minimal tissue damage reduces injection variability
 - Reduced sample loss saves money and materials
 - Fine gauge needle creates smaller injection sites
 - Compatibility with most infusion pumps and stereotaxic holders means an easy integration into existing processes

Gas Anesthesia

LINK 7 Complete Active Surgical Gas Anesthesia System

Stoelting's Link 7 Gas Anesthesia System is your all-inclusive anesthesia solution for stereotaxic and general surgery! This easy-to-use, effective small animal anesthesia system includes three anesthesia stations for increased throughput. Excess anesthetic scavenged away by active charcoal canisters also included. Systems available as tabletop or mobile.

options!

Rodent Warmer X1

Use Stoelting's Rodent Warmer before, during and after surgical procedures to improve surgical outcome and overall longevity. Monitor and maintain animal temperature with three programmable settings: animal specific, timer or use with thermal probe. Available with mouse, rat or home-cage heating pad. *Rectal Thermal probe sold separately.*

Features:

- Easy to use dial control
- Preprogrammed animal temperatures
- Use with or without rectal probe (sold separately)
- Lightweight, small footprint

Add a **Rodent Warmer Control Box** to **utilize your Stereotaxic Base's warming feature!**

RODENT WARMER X1

53800	Stoelting Rodent Warmer Control Box with Cable* *For use with integrated Stereotaxic warming base	\$795.00

Heating Pad Options

Rodent Warmer X2 with TouchScreen Display

Use Stoelting's Rodent Warmer X2 before, during and after surgical procedures to improve surgical outcome and overall longevity. The integrated touch screen allows for easy programming and controls 2 independent heating pads simultaneously. Available with mouse, rat or home-cage heating pad. *Rectal Thermal probe sold separately.*

Features:

- Integrated touch screen for easy programming
- Controls two independent heating pads simultaneously
- Rectal probe (sold separately) for body temperature feedback
- Available with a combination of mouse, rat or cage size heating pads
- Heating pad included (mouse, rat or home cage)

Cautery

Low-Temperature Cautery Pens

These patented Aaron RAM™ cauteries have an impressive shelf-life and are quite simply the best cauteries ever made. With a variety of low temperatures and fine tips the surgeon is assured of precise pinpoint hemostasis. All disposable cauteries are individually packaged, sterile, 10 per box.

LOW-TEMPERATURE CAUTERY PENS

59015	Micro fine tip, 850°F (454°C)	\$125.00
59117	Fine tip, 1300°F (704°C)	\$115.00
59118	Adjustable fine tip, 700°-1200°F (371°-649°C)	\$155.00
59119	Elongated fine tip, 1100°F (593°C)	\$115.00

High-Temperature Cautery Pens

High-temperature cauteries are popular for many types of procedures including pinpoint hemostasis, controlling diffuse bleeders, vasectomies, and sculpting woven grafts. Individually packaged, sterile, 10 per box.

HIGH-TEMPERATURE CAUTERY PENS

59016	Fine tip 2200°F (1204°C)	\$135.00
59120	Loop tip 2200°F (1204°C)	\$135.00
59123	Adjustable fine tip, 1500-2100°F (816°-1149°C)	\$180.00
59125	Vasectomy tip, 1800°F (982°C)	\$135.00
59126	Fine tip micro, 2000°F (1093°C)	\$140.00
59127	Loop tip micro, 2000°F (1093°C)	\$140.00
59128	Vasectomy tip micro, 1600°F (871°C)	\$140.00

AC-Powered Cautery

This line-powered Cautery Instrument maintains desired temperature, from 300°F to 2200°F (149°C to 1204°C) consistently during tissue contact, and does not rapidly diminish. The slim, autoclavable handpiece, with six-foot cord, is convenient to maneuver into position. It accepts an assortment of reusable, non-sterile, autoclavable platinum tips.

A-Loop Tip

B-Fine Tip, Flat

C-Loop Tip, Angled

D-Ball Point E-Fine Tip

O-Circular Tip

V-Vasectomy Tip

ThermaLite® Disposable Tips have the quality of reusable with the convenience of disposable. Specifically designed for the AC-Powered Cautery Instrument, these disposable electrodes heat up faster than the reusable tips.

Reusable Tips have solid 1" brass shanks and the tips are made with 24-gauge platinum wire. They are available as A, B, C, D, E, O, and V tips. These general-purpose electrodes are supplied non-sterile, but may be autoclaved.

**Visit website
for individual
tip options!**

AC-POWERED CAUTERY PENS

59005	Cautery Instrument with Disposable Tips	\$895.00
59011	Optional Wall or Table Mounting Bracket	\$75.00

Battery-Operated Cautery

The perfect cauterizing tool, this battery-operated Cautery System provides two operating temperatures: 2200° F and 1300° F (1204° C and 704° C).

The easily replaceable, autoclavable, Nickel-Chrome tips require less power and provide longer battery life. The convenient battery spacer converts the handpiece from high temperature to low temperature. Replacement tips are sold in packs of 10.

AC-POWERED CAUTERY PENS

59017	Battery-Operated Cautery System	\$95.00
59018	Replacement Tips, 5mm (10/box)	\$75.00
59019	Replacement Tips, 10mm (10/box)	\$75.00

Sutures

Monofilament nylon, braided silk (permanent) sutures, and chromic gut and synthetic absorbable sutures, are now available from Stoelting. Sold in packages of 12, with semicircular (cutting) needles. All suture indicated for use in general soft tissue approximation and/or ligation and ophthalmic surgery. Only nonabsorbable suture indicated for use in cardiovascular and neurological procedures.

**Sutures for
all your surgical
needs!**

NON-ABSORBABLE

	50498	Visorb (PGA)-Braided	30	2	24.0 mm	\$65.00

Nylon exhibits:

- Uniform diameter of the suture
- Maximum flexibility of the strand
- Excellent and consistent knot security
- Minimal Memory

Silk exhibits:

- Smooth flow through tissue while maintaining optimal knot security

Chromic Gut exhibits:

- Purity of collagen for optimal tensile strength and in vivo performance
- Surface smoothness to facilitate knot run-down and knot strength

Visorb PGA exhibits:

- Excellent tensile strength throughout the critical wound-healing period
- Predictable absorption profile (absorption complete between 90-100 days)
- Excellent knot security

Wound Closure

EZ Clip™ Wound Closing Kit

Perfect for rapidly closing wounds, providing maximum holding force with minimal trauma. Much easier, and faster to use than the conventional sutures and needles. The Applier works like a staple gun to rapidly apply clips closures. The Applier will hold a single rack of 20, 9mm wound clips, which are held firm and ready to use by a non-rusting beryllium-copper spring. The Applier will provide maximum holding force with minimal trauma. There is no need of assistance to operate the applier or remover. When the wound is healed, clips are easily removed with the Remover. The EZ Clip™ Kit includes the Applier, case of 1,000, 9mm Wound Clips and Remover. *All parts are sold separately.*

Features:

- Autoclavable in the package!
- Smaller “teeth” provide better clamping and wound closure of the animal’s skin
- Racks of 20 clips are individually packed for easy handling
- The clips are pyrogen free and non-sterile
- Designed for use with mice and rats

**All components
can be ordered
separately! See
website
for details.**

**Stoelting exclusive packaging
of racks of 20 clips in autoclavable
polypropylene provides unmatched
ease of sterilization and storage.**

Reflex Wound Closing Kit-7mm

The 7mm Reflex Wound Closing Kit is ideal for mice and other small animals. Wound clips are pre-filled on a rack ready to be loaded in the 7mm Reflex wound clip applier. The 7mm Reflex Wound Closing Kit includes the Applier, box of 100 7mm Wound Clips, and Remover. All parts are sold separately.

- Easy-to-use
- Designed for use with mice

51465 Cordless Shaver
with #40 Blade

Surgical Shaver Kit for Mice and Rats

The Surgical Shaver Kit includes a powerful, cordless blade clipper providing easy mobility around animals. When fully charged, the clippers provide continuous operation for one hour. Kit includes: rechargeable clipper, #40 detachable blade set, charging stand, 2 Ni-MH battery packs, storage case, 4 oz. clipper oil.

Features:

- Rechargeable, cordless
- 15% faster and 10% smaller than comparable models
- Quiet operation

SURGICAL SHAVERS

51465	Cordless Shaver with #40 Blade **Recommended**	\$475.00
51482	Blade, Surgical/Shaving #40, Steel, Extra	\$35.00
51483	Blade, Surgical/Shaving #50 Blade, Steel, Extra	\$35.00

51484 Surgical Clipper

Two Speed Surgical Clipper

Professional two-speed clipper designed for extremely fast cutting! Includes: clipper, size 10 UltraEdge blade, and clipper oil.

Features:

- Two speed operation: 3400 spm and 4400 spm
- Detachable blades for ease of changing and cleaning
- Maintenance free

TWO SPEED SURGICAL CLIPPERS

51485	Surgical Clipper, Two Speed, w/#10 & #40 blades	\$285.00

Trimmer, Rats and
Mice, Rechargeable

Rechargeable Surgical Trimmer Kit for Rats & Mice

The Surgical Trimmer is the shaver of choice for surgical prep! Kit includes a cordless, detachable blade trimmer, charger stand and #40 stainless steel blade for trimming around tight areas.

RECHARGEABLE SURGICAL TRIMMERS

51472	ProClip Ion Trimmer	\$85.00
51473	Replacement Blade for 51472 Trimmer	\$25.00

**Cordless
trimming
made easy!**

Surgical Lights

Stereotaxic LED Light

Stoelting's Stereotaxic LED Light is useful for stereotaxic surgery or any location requiring LED light! On/Off switch option also available.

- Magnetic Base/Puck System to anchor Magnifier on non-magnetic surfaces
- Small base (1 5/8" diameter)
- 10" flex arm (25.4cm)
- Universal Power Supply included (110-220V)

STEREOTAXIC LED LIGHT

59290	LED Stereotaxic Light	\$250.00
59291	On/Off Switch for LED Stereotaxic Light	\$75.00
59292	Stereotaxic Magnifier Glass	\$250.00

Fiber-Lite® Illuminator

- UL, CE, and C-UL approved for global use
- All Fiber-Lite® Illuminators are backed with a 3-year warranty

Fiber-Lite Illuminators offer high-intensity, cold light illumination when coupled with any of our single or dual fiber optic light guides, which provides a lamp life of over 200 hours at full intensity. Each light guide measures 23 inches (58.4cm) long.

FIBER-LITE® ILLUMINATOR

59258	Illuminator, 150W, Single Gooseneck	\$750.00
59259	Illuminator, 150W, Dual Gooseneck	\$850.00
59265	Light Probe Kit, 6 Probes	\$675.00
59212	Replacement Bulb	\$50.00

If your main power supply is 220V, add a "V" to the product number.

LED Coolight Illuminator

LED Coolight Illuminator has a long-life LED source, and is environmentally and fiscally responsible. It would take 125 replacement bulbs before the LED Coolight hit 75% capacity. Energy use is just one-third of a 150W halogen. LED lights have almost no infrared energy—they are truly a "cool light" source—unlike Halogen lamps that transmit IR heat that can damage a sample or specimen.

LED COOLIGHT ILLUMINATOR

59254	Coolight Illuminator, LED, Dual Gooseneck	\$995.00
59253	Coolight Illuminator, LED, Single Gooseneck **Recommended**	\$895.00

Alcohol Prep Pads

Sterile, nonwoven sponges are saturated with 70% Isopropyl Alcohol. These pads provide maximum absorbency for scrubbing and cleansing. Packaged individually in sealed pouch. Case of 4,000.

ALCOHOL PREP PADS

50974	Alcohol Prep Pads, Sterile, 11/8" x 23/8" (2.86 cm x 6 cm), Case of 4,000	\$85.00
--------------	--	----------------

Sterile Disposable Scalpels

Stainless steel surgical blades mounted on plastic handles

with fluted finger-grips. Scalpel blade is safely protected by pull-off protector shield. Individually sealed in peel-apart, see-through package. Box of 10.

STERILE DISPOSABLE SCALPELS

52186	Size 10, Box of 10	\$15.00
52187	Size 11, Box of 10	\$15.00
52188	Size 15, Box of 10	\$15.00

Surgilube® Surgical Lubricant

Forms a transparent lubricating film that spreads readily. Non-irritating to tissue. Allows easy insertion of probes, catheters, surgical instruments, etc. Sterile and bacteriostatic. Box of 12.

SURGILUBE® SURGICAL LUBRICANT

50976	Surgilube®, 2 oz. (59 ml), Box of 12	\$50.00
50977	Surgilube®, 4 oz. (118.26 ml) Box of 12	\$80.00

Parafilm M® Laboratory Film

Parafilm M® is a semi-transparent, flexible thermoplastic. It molds and seals tightly around test tubes, flasks and irregular surfaces. The Dispenser/Cutter (51359) accommodates either 4" or 2" wide rolls, and a quick downward push cleanly cuts at the desired length.

Sharps Disposal Containers

Sharps Containers feature one-hand, one-step, no-touch sharps depositing. Containers feature horizontal loading. Non-mechanical sharps openings minimize tampering and contamination. Safe to autoclave or incinerate. See website for additional items.

SHARPS DISPOSAL CONTAINERS

52190	1 Gal. (3.8 L) Red with clear lid	\$10.00

--------------	------------------	----------------

Instrument Cup

An instrument cup designed to arrange surgical instruments in the open position. Made of durable silicone, the instrument cup replaces glass and metal instrument pans, and won't damage delicate instrument tips. Large instruments rest against the bottom and side, while small instruments may be suspended from the scalloped brim. The Instrument Cup has a wide base (5 in/12.7cm) for stability, making it resistant to slippage on table surface.

Micro-Dissecting Spring Scissors

All instruments
are shown in their
actual size!

Micro-Dissecting Spring Scissors are designed with small tips, useful for cutting delicate tissues during microsurgical procedures. Spring design eliminates handedness (can be used with left or right hand) and minimizes pressure required to close. Straight, curved and angled spring scissors available.

Did you know...

Stoelting supports **more than 40 scientific meetings** every year?

Below is a list of Societies Stoelting has supported for over the past 25+ years!

- Society for Neuroscience
- Society for Behavioral Neuroendocrinology
- International Behavioral Neuroscience Society (IBNS)
- NIH Research Festival
- Canada Neuroscience
- Federation of European Neuroscience Societies (FENS)
- AALAS
- Neurotrauma
- International Narcotics Research Conference (INRC)
- Organization for the Study of Sex Difference (OSSD)

Please contact us if you think Stoelting would be a good fit for your conference!

We provide funding to the symposiums, conferences and meetings in sizes ranging from a few hundred, to tens of thousands of scientists. Not many other companies support the life sciences, particularly neuroscience, as much as Stoelting. Please keep that in mind when deciding

where to purchase equipment or supplies. Ask yourself... does this company provide funding and support to the meetings that I attend so that I am able to present my data and interact with other scientists?

Neuro@StoeltingCo.com • 1-800-860-9775

Sterilizers and Sterilizing Trays

50287 Dry Sterilizer

Hot Glass Bead Dry Sterilizer

- Sterilization time 2-5 seconds
- Small footprint
- Meets new NIH guidelines

Insert the cleaned surgical instrument for 2-5 seconds, and remove. Within 30 seconds, the surgical instruments are cool enough to use. The chassis stays cool, even at the end of a full day of operations. The air above the unit is cool enough to insert an instrument into the well without discomfort. The working end is sterile before the handles get hot. The sterilizer's small size fits conveniently into the back corner of a hood or surgical table. One package of glass beads is included with the instrument.

HOT GLASS BEAD DRY STERILIZER

50287	Dry Glass Bead Sterilizer	\$495.00
50287V	Dry Glass Bead Sterilizer, International 220V	\$495.00
50289	Glass Bead Refill, 10 oz. Pkg.	\$25.00

Sentry Digital Ultrasonic Cleaner

The Sentry Ultrasonic Cleaner is a high efficiency cleaner specially developed to clean surgical instruments. Ultrasonic waves pump micron-sized bubbles into the water. These bubbles fit into the tightest spaces that would be impossible to clean by traditional methods. When the bubbles implode, water hits the instrument at speeds up to 250 mph-a very powerful cleaning action.

58620 Ultrasonic Instrument Cleaner

SENTRY DIGITAL ULTRASONIC CLEANER

Infusion/Withdrawal Syringe Pumps

Manual Microsyringe Pump

Stoelting's Manual Microsyringe Pump is a convenient instrument when using visual feedback to determine the amount to be infused or withdrawn. It also provides an economical means for any application requiring injecting/withdrawing a calibrated volume under manual control.

Applications Include:

- ICSI microtitration
- Chromatography
- Microinjections

Accessories Included

The Microsyringe Pumps includes one 100 Microliter syringe, 1 female Luer Lock-to-tubing adaptor and 10 ft. of Intramedic® PE polyethylene 60 tubing, .030" I.D., x .048" O.D.

53100 KD Scientific
Infusion Only Syringe Pump

KD Scientific Syringe Pumps

KD Scientific Syringe Pumps with infuse and withdraw capabilities provide maximum flexibility for varied applications. This feature permits applications such as automatic withdrawal of samples and unattended filling of syringes, fluid level adjustments with continual infusing and withdrawing, infusion of drug or nutritional materials, and diffusion into chemical reactors.

Visit our website: StoeltingCo.com

Touch-Screen Syringe Pumps

53270L Quad Syringe Pump, Legato

Highest level
of smooth flow,
accuracy and
precision!

The unique
Legato Series
offers
unparalleled
ease of use.

Touch-Screen Syringe Pumps

The unique Legato Series offers unparalleled ease-of-use through the high resolution touch-screen user interface. This new level of simplicity is combined with advanced fluidic performance to give you the highest level of smooth flow, accuracy and precision to meet all your application needs including drug discovery, nanofluidics, mass spectrometry and more. The Legato series of syringe pumps are available as Infuse Only, Infusion/Withdrawl and Push/Pull Syringe Pumps.

- Touch-screen interface and easy-to-use display
- Vertical positioning decreases footprint
- Interconnect up to 99 pumps
- Complete regulatory compliance worldwide

Microwave In Vivo Brain Fixation

Microwave Fixation System

- Gold standard for brain tissue fixation
- Installation and training included
- Brain tissue fixed in less than 2 seconds!
- Air-cooled system—no water needed
- All controls are done through the touch-screen panel display
- Improved safety design—less than 1mW/cm²
- CE marked and approved
- Eliminates the use of other fixation methods such as paraformaldehyde/formalin

Microwave fixation is the method for reliable and rapid fixation of brain tissue. If your research involves protein phosphorylation, no other method compares.

The In Vivo Microwave Brain Fixation System is the fastest and most effective known method for halting brain chemical activity. Levels of enzyme-regulated neurotransmitters, and other rapidly-acting metabolic substances in the brain, are stopped at the levels that existed in the living animal, brain size and structure remain virtually unchanged! The In Vivo Microwave Brain Fixation Systems have been used for more than 30 years to help uncover brain activity in rodents not accessible using conventional methods of brain fixation resulting in publications in Science, Nature, and many, many other well known journals.

Better than Freezing

A common method is the cooling or freezing by immersion of a living animal's head or brain tissue in liquid nitrogen or cooled freon in order to inactivate enzymes. Although, cooling is frequently used in many laboratories, it is not fully effective in preventing post-mortem changes. The time required to freeze deep structure of the brain may range from 10-90 seconds due to the poor thermal conductivity of tissues surrounding the brain. Post-mortem changes will occur during this period.

An alternate method is microwave heating to inactivate enzymes.

If microwave power of sufficient level is focused on the animal's head, the enzymes in the whole brain can be completely inactivated in a very short time. Further, the brain can be dissected easily and slowly at room temperature.

IN VIVO MICROWAVE FIXATION SYSTEM

50037	In Vivo Microwave Fixation System, 5kW	\$64,995.00
--------------	--	--------------------

SPECIFICATIONS

Oscillator	Panasonic Magnetron 2M265-M11
Microwave Power Output	5kW max. (2-5 kW variable)
Oscillation Frequency	2,450±30MHz
Cooling Requirements	Air Cooling
Exposure Time	0.10-2.99sec (0.01 sec steps)
Pausing Time	3 minutes
Power Consumption	8kVA
Frequency	50 or 60 Hz
Power Requirements	190-240V 30A 3 Phase or 380-440V 20A 3 Phase
Outside Dimensions	750W x 550D x 1,275 mmH
Weight	Approximately 103 kg

Microwave In Vivo Brain Fixation

Therefore, the microwave irradiation system is quite useful when measuring acetylcholine, choline, cyclic AMP, cyclic GMP, GABA, DOPA, 5-HTP, serotonin, endorphin, prostaglandin, catecholamines and their metabolites and phosphorylated proteins in the brain.

Microwave fixation is done by elevating the temperature of the brain up to 75-90°C as rapidly as possible.

Patented Microwave Focus Applicators

Microwaves are channeled and focused by the wave guide which focuses the microwaves from above the head, rather than in front. The entire rat head is placed in a uniform microwave field. Movements of the head do not change the field strength or microwave distribution. Thus, uniform fixation of the whole brain is achieved, without "over cooking" and damage to the hypothalamus.

Muromachi's unique applicators provide protection to the researcher and also compensate for individual differences between animals, giving more reproducible results.

Compact Mobile Cabinet

The Muromachi Microwave Fixation System is enclosed in one cabinet, mounted on 5" casters, with a single convenient control panel. Holders are available for animals from 15 to 500 gms. Order appropriate applicators and holders for your application.

APPLICATORS/RESTRAINERS		
50041	Applicator head for rodent sizes 15-40g	\$6,995.00
50052	Restrainer, Mouse (15-20g)	\$1,395.00

50057	Restrainer, Rat (400-600g)	\$1,395.00

Eliminates the use of other fixation methods
such as paraformaldehyde/formalin!

Tissue Preparation

McIlwain™ Tissue Chopper

The McIlwain™ Tissue Chopper is a proven instrument for rapidly sectioning living or fixed tissue, without freezing or embedding, to harden the tissue. It cuts living tissue into slices, cubes, arterial rings, etc. with a minimum of functional disturbance.

These preparations can be used in studies of metabolism or for electrophysiology. The McIlwain™ Tissue Chopper may also be used to cube fixed tissue for araldite embedding and EM.

The specimen is affixed to filter paper or plastic discs (51354) and clipped to the instrument's stainless steel table top (cyanoacrylate adhesive may be used to hold tissue pieces in otherwise unstable positions.) The table moves at a pre-set speed. As it moves, a chopping arm is raised automatically, and chops down at frequencies from zero to 200 strokes per minute. A pre-set stop prevents the attached blade from penetrating the filter paper and impacting the

instrument's stainless steel table. In this way, serial sections of live tissue from 0-1 mm thickness may be cut rapidly.

The thickness is pre-set with a micrometer graduated in 1 micron and 25 micron increments. After sectioning in one plane, the instrument's table may be rotated any number of degrees, and the process repeated, to obtain cubes or prisms.

Includes one pack of blades.

MCILWAIN™ TISSUE CHOPPER

51350	McIlwain™ Tissue Chopper	\$2,995.00
51352	Blades, Pkg/10	\$10.00
51354	Plastic Discs, Pkg/10	\$30.00

If your main power supply is 220V, add a "V" to the product number.

Stoelting Tissue Slicer

Fast production of living tissue slices

Originally designed to prepare thin slices of living brain, the tissue slicer is also excellent for slicing other tissues, blocking fixed tissue for histology, and slicing electrophoretic gels. Sections as thin as 150 microns can be reliably prepared. Tissue cutting is done with a standard double-edged razor blade.

Two Models

The 51425 Tissue Slicer has a conventional vernier micrometer, resolution 10 microns. The 51415 Digital Tissue Slicer has a digital display electronic micrometer, with 1 micron resolution.

Advantage of the 51415 Digital Tissue Slicer

- Switch from mm to inches
- Set zero at any point
- Set low- and high-tolerance limits
- Features over-travel warning signal and output to a printer, processor, data logger or computer

Reversible Handedness

The tissue slicer can be reversed as to left or right handedness. In use, the tissue is placed on the moistened filter paper and moved beneath the cutting edge. The cutting arm is lifted by its handle. The pin is removed and the arm is released, falling by its own weight (and assisted by the spring) thereby slicing through the tissue at high velocity. The cut tissue slice is removed from the razor blade with a small artist's brush moistened in incubation media. The cutting arm is lifted, the dovetail slide moved for the next slice, and the process repeated.

STOELTING TISSUE SLICER

51425	Tissue Slicer, Vernier Micrometer	\$795.00
51415	Tissue Slicer, Digital Micrometer	\$1,195.00
51427	Metal Blades, Pkg/10	\$10.00

51388 Small Rat Coronal Stainless Steel Brain Matrices

Rodent Brain Matrices

These matrices are precisely machined and highly polished to ensure reproducible sectioning. Rat and mouse brain matrices are available. Coronal and sagittal sections at 1 mm intervals. All coronal brain matrices have an additional mid-line sagittal cut to aid in the separation of the left and right hemispheres. The mouse brain matrices can also be used on neonatal rat brains. Divisions are 1 mm apart.

Dimensions: 1 Hx1.75 Lx1.125 W in.
(2.54H x 4.45L x 2.86W cm)

**Stainless steel, 0.5mm intervals
also available!**

Brain Punch Set

This Brain Punch Set, with spring-loaded nylon expellers and a convenient handle, facilitates the "Palkovits Punch" technique of dissecting out specific brain nuclei for neurochemistry.

The nuclei are punched from frozen brain sections on glass slides, and expelled into the reagents. Spring-loaded expellers avoid risk of contamination that might be caused by expelling with breath.

Each punch has an electropolished sharp end for smooth cuts and minimal tissue adhesion. The Brain Punch Set includes the following: handle, 0.25, 0.50, 0.75, 1.0, and 1.25 (±5%, slight variation due to electropolish etching to sharpen). Other sizes available. Replacement punches available individually, visit StoeltingCo.com or StoeltingEurope.com.

57401	Brain Punch Set	\$425.00
--------------	-----------------	-----------------

Cervical Dislocator & Decapitators

Cervical Dislocator

The Cervical Dislocator is a completely humane and efficient means of sacrificing laboratory rodents bloodlessly. Evidence indicates that the brain stem is terminated instantly by a blow from the metal bar.

When used with the plastic restraint cones, the animal can be effectively and safely restrained during transfer between cages or through all necessary handling. The 5 cm opening is sufficient for most laboratory rodents. A 6 cm model is also available.

CERVICAL DISLOCATOR

51360	Cervical Dislocator, 5 cm	\$295.00
51365	Cervical Dislocator, 6 cm	\$295.00
51361	Plastic Restraint Cones Pkg/50	\$30.00

Decapitators

Stoelting's small animal decapitator has hardened and ground surgical stainless steel blades, aluminum base and stainless steel hardware. With its 1.5" (3.81 cm) square maximum blade opening, it is suitable for decapitating rats, mice and other small animals. The decapitator cuts cleanly and quickly through bone and tissue. The base has four holes for bench mounting.

The large animal decapitator is similar to our small animal decapitator, but with maximum blade opening of 4" (10.16 cm) square. Replacement blades are available only for the 51330.

DECAPITATORS

51330	Small Animal Decapitator	\$695.00
51331	Large Animal Decapitator	\$1,395.00
51327	Replacement Blades for 51330, Must be factory installed	\$225.00

Cuts clean and quick!

For reliable and rapid fixation of brain tissue in less than 2 seconds, see page 104!

Rat and Mouse Bone Strength Tester

Measure bone strength in rats and mice!

Bone Strength Tester

Each Bone Strength Tester is configured for administration of the three-point bending method yielding biomechanical parameters including force, stiffness and energy necessary for break. Torsion, Tensile Strength, Compression and Wound Breaking techniques can also be performed using optional sensors and accessories. Computer software is included for data acquisition.

Used to analyze bone strength in studies associated with:

- Age-related Bone Loss
- Hormone Replacement Therapy
- Weight-Bearing Exercise
- Vitamin Deficiency

BONE BREAKING DEVICE

50420	Bone Strength Tester, Small Animals	\$61,995.00
50421	LV Compressing Adapter, Rat (5-350g)	\$1,495.00
50422	LV Compressing Adapter, Rat (350-450g)	\$1,495.00

Small Animal Ventilators

50098 MiniVent Ventilator

**Ideal ventilator
for mice, birds,
perinatal rats and
perinatal mice.**

**No valves to clog.
No vibration.
Low noise.**

Ventilator For Mice and Perinatal Rodents

The Ventilators for Mice and Perinatal Rodents are compact, quiet, lightweight and virtually vibrationless. They may be positioned directly next to the animal, eliminating tidal volume error due to system compliance.

While designed specifically for mice, the MiniVent can be used for any animals (e.g. birds and perinatal rats) which require tidal volumes in the range of 30-350 μ l. The MicroVent Ventilator is ideal for very small animals, even perinatal mice, which require tidal volumes in the range of 0-130 μ l. Both feature respiratory rates of 60-400 breaths per minute.

The tidal volume can be varied continuously throughout its range during operation without interrupting ventilation. The expired air can be recovered at the collection ports for sampling, recycling or generating a positive end expiratory pressure (PEEP). Room air, or any non-explosive gas mixture, can be used to feed the pump intake.

Each ventilator comes complete with: one AC wall-mounted power supply (115 or 220V); two silicone tubings, 1.5mm I/D, 3.0 mm O/D, 14 cm length; one 1.3mm O/D tracheotomy Cannula; one 1.2 OD Intubation Cannula.

**Visit our website: StoeltingCo.com
for complete information.**

Features:

- Stroke volume range from 30 to 350 μ l (MiniVent)
- Stroke volume range from 0 to 130 ml (MicroVent)
- Ventilation rate from 60 to 400 breaths/minute
- Simple adjustment of stroke volume while running
- Valveless piston pump, no valves to clog
- Very small instrument/circuit dead space volume
- Compact construction, easy to install close to animal
- No vibration, very low noise
- Reduced tidal volume error

VENTILATOR FOR MICE AND PERINATAL RODENTS

50098	MiniVent Ventilator	\$3,395.00
50099	MicroVent Ventilator	\$4,095.00
50100	Midi-Ventilator for Mice	\$4,295.00

For 220V, add a "V" to the catalog number

Ugo Basile Rodent/ Cat/Rabbit Ventilators

Ugo Basile's Rodent/Cat/Rabbit Ventilator is a volume-controlled mechanical ventilator (according to Starling's ventilation method), designed for use with rodents, cats, rabbits and animals of similar size. It consists of a variable speed geared motor linked by a novel variable stroke mechanism to easily interchangeable cylinder/piston assemblies.

Features:

- Interchangeable cylinder/piston assemblies (5, 10, 30, 50 and 100ml)
- Quiet operation, both acoustically and electrically (negligible R.F. broadcasting)
- Reliable mechanics and impeccable finishing: long lasting
- Synchronised START/STOP function available as optional

Ugo Basile Mouse Ventilator

This new Respirator features:

- The tidal volume, in the range 0.1-1 ml (or 0.05-0.5 with the smaller piston installed)
- Ideal for use with mice, small birds and perinatal rats
- Unique design
- Compact
- Reliable
- Silent

New Lower Pricing!

Blood Pressure

50370 Muromachi Blood Pressure Monitor

Blood Pressure Monitor

Non-invasive Blood Pressure Monitor

- Preheating of animals not required
- Use with animals under 10 grams
- Use with C57 BL6 Mice and colored Mice
- Use with Zucker Fatty Rats
- Use with Hamsters (with a leg cuff anesthetic)
- The only monitor that can be used with Guinea Pigs—even without anesthesia
- The only monitor that can be used with OB (diabetic model) Mice

Preheating of animals not required

Provided the room temperature is at least 23°C, the animal's blood pressure can be measured without heating the animal. After photoplethysmographically measuring tail arterial blood pressure, pulses are stored in the computer memory and peak levels of the pulses are plotted on a display.

Easy Operation

- Two operation modes are available—Mode 1: HR (Heart Rate) and SBP (Systolic Blood Pressure) and Mode 2: HR, SBP, MBP (Mean Blood Pressure) and DBP (Diastolic Blood Pressure, calculated value) can be measured.
- Continuous measurement can be performed up to ten (10) times.

**The only
non-preheating,
non-invasive
Blood Pressure
Monitor for
Mice and Rats**

- Printout function
- Colored mice such as C57BL/6, neonatal mice, hamsters (anesthetized) and guinea pigs (non-anesthetized) can be measured.
- Sick animals can be measured. (e.g. animal with cardiac infarction)
- Multi-channel system is no longer needed. Just prepare multiple restrainers, and measurement can be done one after the other.
- Auto-Sequence Function blood pressure of a tail artery of an animal can be monitored automatically at specified time intervals, which can be 1-99 minutes in length.
- An RS-232C interface is provided on the rear panel of the main unit. Using the optional Data Collection Software (Windows OS only) the data obtained can be exported to a personal computer and stored as a CSV file.
- The animal holders are made of dark brown acrylic, allowing BP measurement under relatively stress-free conditions.

Included Accessories

Includes built-in high-speed printer, 9" (22.86 cm) display, measuring stand, choice of cuff-pulse sensor, animal holder, and 5 rolls of thermal chart paper.

For PC compatibility, Data Collection Software 50391, sold below, is not required.

BLOOD PRESSURE MONITOR

50370	Muromachi Blood Pressure Monitor	\$24,995.00
50391	Data Collection Software for Windows	\$495.00

If your main power supply is 220V, add a "V" to the product number.

Mouse Restrainer, Head and Tail Access

These mouse restrainers are built in cylinder-shaped perspex. Lateral slots and holes allow for the animals ventilation and make the access for interperitoneal (i.p.) drug administration possible. The available space for the animal can be

adjusted by means of a sliding piston, thereby keeping the whole tail free for a pulse transducer and cuff positioning or for intravenous (i.v.) drug administration. The animal is led in from the back and can walk out in the front, thus avoiding dragging it backwards.

MOUSE RESTRAINER, HEAD AND TAIL ACCESS

51324	Mouse Restrainer, Head and Tail access, 0-50g	\$350.00
51325	Mouse Restrainer, Head and Tail access, 0-35g	\$350.00
51326	Mouse Restrainer, Head and Tail access, 0-25g	\$350.00

Rabbit Restrainer

Provides total visibility of the animal, and aids in retaining body warmth. The non-slip floor surface provides better footing and helps to calm the animal. A curved back/butt plate minimizes the possibility of a broken neck.

RABBIT RESTRAINER

51328	Rabbit Restrainer, 0-4 kg	\$595.00
51329	Rabbit Restrainer, 4-7 kg	\$595.00

Rodent Restraint Cones

Disposable plastic restraint cones hold the animal safely in position for injections through the plastic bag, for decapitation, for cervical dislocation, or for examination

of collected field specimens such as field mice or rats. The scientist avoids contact with feces or urine, and avoids bites and scratches.

The animal is easily loaded into the cone at the wide end, and heads for the breathing hole at the small end. Sold in packs of 50.

RODENT RESTRAINT CONES

51361	Plastic Restraint Cones, Pk/50	\$30.00
--------------	--------------------------------	----------------

For more sizes, visit "Histology" on our website! www.StoeltingCo.com

Head Access Rodent Restrainer

Provides access to the head and allows access to food and water. Offered in four sizes to accommodate indicated rodent weights.

HEAD ACCESS RODENT RESTRAINER

51332	Head Access Rodent Restrainer, 15-30g	\$125.00
51339	Head Access Rodent Restrainer, 30-125g	\$150.00
51333	Head Access Rodent Restrainer, 125-250g	\$150.00
51334	Head Access Rodent Restrainer, 250-425g	\$150.00

Tail Access Rodent Restrainer

The head is pushed back by the moveable disk so that the tail projects out the hole in the acrylic plate. Perfect for injections, blood sampling, or blood pressure monitoring. Offered in four sizes to accommodate indicated rodent weight.

TAIL ACCESS RODENT RESTRAINERS

51338	Tail Access Rodent Restrainer, 15-30g	\$125.00
51337	Tail Access Rodent Restrainer, 30-125g	\$150.00
51336	Tail Access Rodent Restrainer, 125-250g	\$150.00
51335	Tail Access Rodent Restrainer, 250-500g	\$150.00

ANY-maze Behavioral Tracking Software

ANY-maze

ANY-maze

Behavioural tracking software

ANY-maze is today's most advanced video tracking system. Trusted by thousands of researchers around the world, ANY-maze couples an unrivalled depth of features with a simple, familiar design, to provide automated testing in virtually any behavioural test.

ANY-MAZE

60000

ANY-maze

\$6,495.00

Test ANY-maze for yourself!
Put ANY-maze to use in your research and see the software in action. Download the latest version of ANY-maze at www.ANY-maze.com, or contact us for a FREE 30-day trial!

Download for free

Download ANY-maze right now and try it for free. No fuss, forms or bureaucracy - you can be testing ANY-maze in your own apparatus in five minutes time. Got questions? Just email us—we support everyone, forever, for free.

Easy-to-use

As a scientist you want to run tests, not spend time learning software and with ANY-maze you'll be up and running in no time. Visit www.ANY-maze.com to learn more!

True flexibility

ANY-maze will happily track a single mouse in a radial arm maze, or simultaneously track sixteen rats in their home cages for a week. And ANY-maze isn't limited to tracking rodents. Users track quails, marmosets, zebra-fish, goats...

Outstanding value for money

ANY-maze offers the best value for money of any video tracking system. Not only do you get all the features for a single price - that's right, no modules or add-ons - but lifetime support and unlimited software updates are free!

Fully featured

Despite its ease of use, ANY-maze is no lightweight with features like moveable zones, three-point tracking, and freezing detection, etc., etc., etc.

AMi-2 interfaces

The AMi-2 family of low-cost interfaces make it even easier to connect to a wealth of equipment typically found in behavioural labs, such as optogenetic lasers, shockers, pellet dispensers, levers, running wheels, gas analysers, lickometers, photobeams, levers, cue-lights...you get the idea! See page 116-117.

ANY-maze Behavioral Tracking Software

Tracking in ANY-maze requires no special set-up or parameters—you put the animal in the apparatus and it tracks

ANY-maze doesn't predefine anything about the apparatus in which it will be tracking

ANY-maze can assess literally hundreds of results for a test and present them in different ways

ANY-maze can easily be connected to a wealth of devices commonly used in behavioural tests

ANY-maze manages complete experiments

Test	Animal	Code	Stage	Trial	Reason ended	Status
1	1	C	Acquisition	1	Found platform	Completed
2	2	A	Acquisition	1	Test duration	Completed
3	3	C	Acquisition	1	Found platform	Completed
4	4	A	Acquisition	1	Test duration	Completed
• 5	5	C	Acquisition	1		Ready
• 6	6	C	Acquisition	1		
• 7	7	B	Acquisition	1		
• 8	8	B	Acquisition	1		
• 9	9	B	Acquisition	1		
• 10	10	B	Acquisition	1		
• 11	11	C	Acquisition	1		
• 12	12	C	Acquisition	1		
• 13	13	B	Acquisition	1		
• 14	14	A	Acquisition	1		

ANY-maze can track in live images from a camera, or in pre-recorded video files

Test duration (s)

Treatment	N	Mean	SD (note 1)	Data (notes 2, 3)
Saline	6	9.38	±6.03	19.0, 8.5, 11.3, 3.7, 11.4, 2.4
Compound X 1.0 mg/kg	5	18.72	±11.53	3.1, 30.7, 24.3, 10.3, 25.2
Compound X 5.0 mg/kg	5	33.46	±16.19	42.5, 35.7, 51.9, 26.2, 10.0
Compound X 10.0 mg/kg	5	83.76	±31.34	118.5, 110.3, 65.9, 53.1, 51.0

ANOVA (notes 4, 5): $F(3,17) = 17.0868$ $p = 0.000$

Student-Newman-Keuls test (notes 5, 6)

Saline vs. Compound X 1.0 mg/kg	$q(17,2) = 1.1655$	$p = 0.421$
Saline vs. Compound X 5.0 mg/kg	$q(17,3) = 3.0056$	$p = 0.114$
Saline vs. Compound X 10.0 mg/kg	$q(17,4) = 9.2848$	$p = 0.000$
Compound X 1.0 mg/kg vs. Compound X 5.0 mg/kg	$q(17,2) = 1.8401$	$p = 0.211$
Compound X 1.0 mg/kg vs. Compound X 10.0 mg/kg	$q(17,3) = 8.1192$	$p = 0.000$
Compound X 5.0 mg/kg vs. Compound X 10.0 mg/kg	$q(17,2) = 6.2792$	$p = 0.001$

Notes:

- SD = Standard deviation.
- The data analysed has been limited in the following way: Trial = Treated trial.
- Animals which are marked as retired have been excluded from this report.
- One-way ANOVA, fixed factor.
- $p \leq 0.05$ is highlighted in red.
- The error term (mean square error) = 334.800

ANY-maze understands the structure of your experiment, so it's able to analyse results between different groups

Get a quick insight into the power and simplicity of ANY-maze at ANY-maze.com!

ANY-maze Equipment

ANY-maze Interfaces (AMi-2)

What do you do if you need to count the number of licks at a water bottle, or determine how far an animal runs in an exercise wheel? Video tracking alone can't help. The answer is AMi-2, the second generation of the popular ANY-maze interface.

There are a total of seven AMi-2 devices which between them can detect and respond to inputs from, amongst other things, levers, running wheels, touch switches and nose-poke holes; and can control devices such as optogenetic lasers, shockers, pellet dispensers, cue lights and speakers. All the AMi-2 devices are fully integrated into ANY-maze and connect to the PC via USB, in most cases you don't even need a power cord.

AMi-2 Optogenetic Interface

The AMi-2 Optogenetic interface is designed to independently control up to four optogenetic lasers during behavioural tests performed with ANY-maze. Using the interface, you can either pulse a laser with very high precision at a specific frequency and duty cycle for a set duration, or you can 'play' a series of arbitrary pulses. If your laser supports it, the interface can also dynamically adjust the laser's intensity.

AMi-2 OPTOGENETIC INTERFACE

60060	Optogenetic Interface for ANY-maze	\$595.00
--------------	------------------------------------	-----------------

AMi-2 Digital interface

The AMi-2 Digital interface is designed to connect ANY-maze to a wide range of equipment typically found in behavioural labs, such as: levers, photobeams, running wheels, some shockers and pellet dispensers, cue lights, etc.

AMi-2 DIGITAL INTERFACE

60064	Digital Interface for ANY-maze	\$595.00
--------------	--------------------------------	-----------------

AMi-2 Touch Switch Interface

The AMi-2 Touch switch interface is designed to detect when an animal touches something conductive. For example, this might be the animal licking a bottle spout, the animal's paw touching a metal plate on the wall of a cage, or the animal slipping from a grid and its paw touching a metal floor.

AMi-2 TOUCH SWITCH INTERFACE

60061	Touch Switch Interface for ANY-maze	\$595.00
--------------	-------------------------------------	-----------------

AMI-2 Relay interface

The AMI-2 Relay interface has six output ports which can be used to turn things on and off under software control. For example, an output could switch on a shocker, turn on a light or activate a pellet dispenser.

AMI-2 RELAY INTERFACE

60063	Relay Interface for ANY-maze	\$595.00
--------------	------------------------------	-----------------

AMI-2 Analogue Interface

The AMI-2 Analogue interface is designed to connect ANY-maze to devices which output analogue signals, for example a respiratory gas analyser, a blood pressure monitor or an EEG. The interface can also output digital signals, which can, for example, represent the location of the animal in the apparatus.

AMI-2 ANALOGUE INTERFACE

60057	Analogue Interface for ANY-maze	\$595.00
--------------	---------------------------------	-----------------

AMI-2 Audio Interface

The AMI-2 Audio interface has six outputs which can be connected to 4-ohm or 8-ohm speakers. Each output can independently play white noise, tones or a sound file under full software control.

AMI-2 AUDIO INTERFACE

60068	Audio Interface for ANY-maze	\$595.00
60066	Speaker for ANY-maze	\$160.00

Electrophysiology Interface

The AMI-2 Electrophysiology interface is designed to help synchronise tests in ANY-maze with tests in electrophysiology systems. It consists of 6 TTL ports, each of which can be configured independently as an input or an output. Used in conjunction with the Electrophysiology synchronisation element of the protocol, the interface allows you to output TTL signals when a test starts, when a new frame is captured from the camera and/or when ANY-maze stores the animal's position in its results.

ELECTROPHYSIOLOGY INTERFACE

60069	Electrophysiology Interface	\$595.00
--------------	-----------------------------	-----------------

ANY-maze Bundle Options

Which ANY-maze Bundle is right for you? See page 138 for more ANY-maze Bundle Options!

ANY-maze Video Tracking Bundle Options

Your complete solution for small animal behavior testing!

ANY-maze is the most versatile, easy-to-use behavior tracking software available. Purchasing a complete ANY-maze package makes it even easier. Purchase an ANY-maze bundle and

you'll receive everything you need for your research. All ANY-maze bundle packages include unlimited software technical support.

ANY-maze with Camera and Accessories Bundle

ANY-maze Camera and Accessories Bundle Includes:

(you supply the computer and maze/apparatus)

- ANY-maze License (Software)
- Camera
- Camera Accessories (lens, ceiling-mount & cables)

ANY-MAZE CAMERA AND ACCESSORIES BUNDLE

60605	ANY-maze System with Camera and Accessories Bundle	\$6,995.00
--------------	--	-------------------

ANY-maze with Computer and Accessories Bundle

ANY-maze Computer and Accessories Bundle Includes:

(you supply the maze/apparatus)

- ANY-maze License (Software)
- Computer (Desk or Laptop)
- Camera
- Camera Accessories (lens, ceiling-mount & cables)

ANY-MAZE COMPUTER & ACCESSORIES BUNDLE

60600	ANY-maze System with Computer and Accessories Bundle, Desktop	\$7,995.00
60601	ANY-maze System with Computer and Accessories Bundle, Laptop	\$7,995.00

ANY-maze System/Laptop with On-Site Training

ANY-maze Computer and Training Bundle Includes:

(you supply the maze/apparatus)

- ANY-maze License (Software)
- Computer (Desk or Laptop)
- Camera
- Camera Accessories (lens, ceiling-mount & cables)
- On-Site Training and Installation from one of our ANY-maze Specialists

ANY-MAZE COMPUTER & TRAINING BUNDLE

60651	ANY-maze System/Laptop with On-Site Training Bundle	\$9,995.00
--------------	---	-------------------

ANY-maze Cameras & Accessories

ANY-maze can be paired with a variety of cameras and accessories to help meet, and optimize, your tracking needs. Additionally, if your research requires something unique, such as the ability to track using simultaneous capture from multiple cameras, or to track in complete darkness, we have options and solutions. Below are some of our recommendations, but if you need assistance in selecting a camera or accessories to meet your specific needs please contact us.

USB CAMERA

60516	B&W USB 2.0 CMOS Camera (Lens Sold Separately) **Recommended**	\$595.00
--------------	---	-----------------

USB CAMERA LENSES (SOLD SEPARATELY)

60528	Lens for 60516, Vari-Focal, 2.8-12mm **Recommended**	\$100.00
60530	Lens for 60516, Vari-Focal, Narrow Angle	\$95.00
60532	IR-Only Lens Filter for 60528	\$50.00

USB CABLES & HUBS

60058	ANY-maze TTL I/O Cable	\$95.00
CUSTOM	BNC to TTL Cable	CALL FOR PRICING
60517B	USB 2.0 Male to Mini Cable, 15ft.	\$40.00
60518	USB 2.0 Extender Cable, 10ft.	\$25.00
60574	USB Hub 7-Port with Power Adapter	\$75.00

ANALOG B&W CAMERA

60510	Analog B&W Camera (Lens Sold Separately)	\$395.00
--------------	--	-----------------

ANALOG CAMERA LENSES (SOLD SEPARATELY)

60520	Lens for 60510, Vari-focal, 2.7-13.5mm	\$155.00
60521	Lens for 60510, Wide Angle	\$325.00
60522	Lens for 60510, Narrow Angle	\$275.00

COMPUTERS

60555	ANY-maze Computer, Desktop	\$1,995.00
60557	ANY-maze Computer, Laptop	\$1,995.00

ACCESSORIES

60545	Universal Camera Mounting Bracket	\$55.00
60540	Infrared Night Light Illuminator	\$95.00
60062	ANY-maze Remote Control (Wireless)	\$295.00
60057	ANY-maze Wired Remote Control	\$170.00

See more options and details
at www.ANY-maze.com

ANY-maze Accessories

ANY-maze photobeam

The AMi-2 photobeams detect when an animal breaks an infrared beam and can be used in a wide variety of situations, such as detecting when an animal passes through a door, detecting nose-pokes, detecting how far down a corridor the animal has travelled.

ANY-MAZE PHOTO-BEAM

60001-21	AMi Photo Beam, 1 set (IR Transmitter & Receiver)	\$150.00
-----------------	--	-----------------

ANY-maze Photobeam array

The ANY-maze photobeam array provide a 'curtain' of photobeams and is often used to detect when an animal rears. It can also be as a movement detector, which can generate reliable movement 'counts' in circumstances in which video tracking can't be used. Use with the AMI-2 Digital Interface (see page 116). *Includes Stand.*

ANY-MAZE PHOTOBEAM ARRAY

60001-02	AMi Photo-Beam Array, 40cm	\$1,495.00
60001-03	AMi Photo-Beam Array, 100cm	\$2,995.00

ANY-maze digitizer card

If you wish to use analogue cameras with ANY-maze you'll need a digitizer card. This converts the analogue signal provided by the camera into a digital format which the software can analyse. distances of up to 50 metres.

ANY-MAZE DIGITIZER CARD

60499	Digitizer PCIe Card, 4 channel	\$995.00
--------------	--------------------------------	-----------------

ANY-maze animal shocker

The ANY-maze animal shocker administers scrambled shock to 8 independent outputs. The intensity, onset and duration of the shock are all under software control, so for example, the intensity of the shock could be altered depending on the situation in a test.

ANY-MAZE ANIMAL SHOCKER

60001-51	ANY-maze Programmable Shocker	\$2,895.00
-----------------	-------------------------------	-------------------

ANY-maze Animal Scale

Based on settings you specify in the protocol, ANY-maze will prompt you to place an animal on the scales before a test; when you do this, it will weigh the animal and record the result. ANY-maze can also optionally calculate an animal's treatment dose based on its weight.

ANY-MAZE ANIMAL SCALE

60052	ANY-maze Animal Scale	\$650.00
-------	-----------------------	----------

AMi-2 Cue lights

The AMi-2 Cue lights are perfect for providing visible cues to animals during tests. The lights are water resistant and are available in a variety of colors and sizes (22mm, white shown here). Use with the AMi-2 Digital Interface (see page 116).

AMI-2 CUE LIGHTS

60045W	AMi-2 Cue lights, white	\$30.00
--------	-------------------------	---------

More colors & options
available online!

AMi-2 Rotary encoder

The AMi-2 Rotary encoder detects rotations an axle. This can be useful in a variety of situations. For example, if the axle has a running wheel mounted on it, the encoder will detect rotations of the wheel; or, if the axle connects to an animal tether, the encoder will detect rotations of the animal. Use with the AMi-2 Digital Interface (see page 116).

AMI-2 ROTARY ENCODER

60048	AMi-2 Rotary Encoder	\$225.00
-------	----------------------	----------

ANY-maze Infrared illuminator

The ANY-maze infrared illuminator allows you to track in very low light or even total darkness.

ANY-MAZE INFRARED ILLUMINATOR

60540	ANY-maze Infrared illuminator	\$95.00
-------	-------------------------------	---------

Can be wall or ceiling mounted.

ANY-box for Mice and Rats

ANY-box ANY-maze Driven Multiple Tests with a Single Base

ANY-box is a multi-configuration behavior apparatus designed to automate a range of standard behavioral tests in mice and rats. ANY-box uses the same basic components in different tests, creating a flexible and affordable solution for behavior analysis. Mouse and Rat complete automated systems include everything you need for automated assessment of:

- Memory
- Locomotor Activity
- Anxiety
- Drug Effects
- Exploratory Activity
- Stress Response

TESTS INCLUDE:

Open Field
Hole Board
Novel Object Recognition
Light/Dark Box
Conditioned Place Preference

**Individual Automated Tests also available.
Each individual automated system includes:**

- ANY-box Software
- ANY-maze Interface
- Universal Base Plate
- Camera & Camera Accessories
- Enclosure of your choice: Open Field, Light/Dark, Conditioned Place Preference, Object Recognition, Hole Board or all 5 tests together!

ANY-box uses the ANY-maze software and camera to track X- and Y- movements. A photobeam IR array is included to track Z- movements (rearing behavior) which is incorporated into the ANY-maze software.

**Automate
up to five
behavior tests!
Computer not
included.**

ANY-box Base
(Includes camera mount
and IR Array)

ANY-box for Mice and Rats

62075 Automated Object Recognition, Mouse

62055 Automated Hole Board, Mouse

**Hole Board not available for Rat.
Rat configurations will differ from the products pictured.*

64000 Automated Conditioned Place Preference, Mouse

63000 Automated Light/Dark Box, Mouse

Multiple cage systems available.
Call for details.

ANY-box

65000	ANY-box 5-Behavior Test System, 40cm, Mouse	\$9,995.00
68500	ANY-box 4-Behavior Test System, 40cm, Rat*	\$19,995.00

COMPLETE AUTOMATED SYSTEMS FOR MOUSE

62000	ANY-box Open Field, 40cm, Clear w/Photobeam Array	\$7,995.00
62050	ANY-box Open Field, 40cm, Opaque w/Photobeam Array	\$8,295.00
62055	ANY-box Hole Board Apparatus, 40cm, w/Photobeam Array	\$7,995.00
62075	ANY-box Novel Object Recognition, 40cm, Clear w/Photobeam Array	\$7,995.00
63000	ANY-box Light/Dark, 40cm, w/Photobeam Array	\$7,995.00
64000	ANY-box Conditioned Place Preference, 40cm, w/Photobeam Array	\$7,995.00

COMPLETE AUTOMATED SYSTEMS FOR RAT

60224	ANY-box Open Field, 100cm, Clear w/Photobeam Array	\$12,195.00
60225	ANY-box Open Field, 100cm, IR Black w/Photobeam Array	\$12,795.00
65202	ANY-box Conditioned Place Preference, 100cm, Clear w/Photobeam Array	\$8,795.00

ANY-box MOUSE ENCLOSURES ONLY (40CM)

60111	Open Field, Clear, Mouse	\$350.00
60122	Open Field, IR Transparent Black, Mouse	\$350.00
62020	Object Recognition, Mouse	\$295.00
62025	Hole Board, Mouse	\$795.00
63100	Light/Dark Box, Mouse	\$495.00
64100	Conditioned Place Preference, Mouse	\$495.00

ANY-box RAT ENCLOSURES ONLY (100CM)

60220	ANY-box Open Field, Enclosure Only, 100cm, Clear	\$675.00
60223	ANY-box Open Field, Enclosure Only, 100cm, IR Black	\$1,195.00
60221	ANY-box Open Field, Enclosure Only, 100cm, Opaque	\$895.00
63201	Light/Dark Box, Enclosure Only, Rat (set of 2)	\$2,495.00
64201	Conditioned Place Preference, Enclosure Only, Rat (set of 2)	\$2,995.00
65201	Object Recognition, Enclosure Only, Rat	\$995.00

Rat and Mouse Behavior Mazes

60135
Morris Water Maze

Water Maze

The Morris Water Maze is one of the most widely used methods in behavioral neuroscience to assess spatial and learning memory. The Water Maze tank is filled with water and equipped with a platform (60030) which acts as a means of escape for animals. During testing, animals learn the location of the platform using spatial cues. The Water Maze tank is made of aluminum and is available in three different sizes for testing of Mice, Rats or both. *Platform (60030) is included.*

WATER MAZE

60135	Water Maze, Mouse, 3.5-4.5 ft Diameter (1.07-1.37m)	\$1,295.00
60136	Water Maze, Mouse/Rat, 4.5-5.5 ft Diameter (1.37-1.68m)	\$1,395.00
60235	Water Maze, Rat, 5.5-6.5 ft Diameter (1.68-2.0m)	\$1,495.00

AVAILABLE ISLANDS

60030	4 in (10.2 cm) Diameter/12 in (30.5cm) Height	\$195.00
60035	4 in (10.2 cm) Diameter/20 in (50.8cm) Height	\$195.00

Barnes Maze

The Barnes Maze is designed for testing spatial learning and memory. Within the maze, animals are motivated to escape from the brightly lit, open platform to a small dark recessed chamber (escape box). During testing, the animal learns the spatial location of the escape box. The maze also includes false escape boxes, which help to remove visual cues that might be observed from a distance or through an open hole.

60170 Barnes Maze

CATALOG NUMBER		TABLE DIA.	HOLE DIA.	HEIGHT	PRICE
60170	Barnes Maze, Mouse	91cm	5cm	90cm	\$2,795.00
60270	Barnes Maze, Rat	122cm	10cm	90cm	\$2,995.00

Save money when purchasing an ANY-maze bundle!

Maze bundle packages include: Laptop computer, USB Camera, Camera Accessories, ANY-maze software and a Stoelting maze of your choice! See pages 138-139 for more details.

Open arms are equipped with height-adjustable lip to minimize falls.

60140
Elevated Plus-Maze

Close-Up of
Elevated Plus-Maze's
Adjustable Rim

Elevated Plus-Maze

The Elevated Plus-Maze is used to assess anxiety in rodents. The maze exploits the conflict between the innate fear that rodents have of open areas, versus their desire to explore novel environments. The Elevated Plus-Maze is designed with an elevated plus-shaped platform, with two closed arms and two open. Both open arms are equipped with height-adjustable lip to minimize falls.

CATALOG NUMBER		LANE WIDTH	ARM LENGTH	WALL HEIGHT	LEG HEIGHT	PRICE
60140	Plus-Maze, Mouse	5cm	35cm	15cm	40cm	\$2,095.00
60240	Plus-Maze, Rat	10cm	50cm	40cm	40cm	\$2,295.00

Elevated Zero-Maze

The Elevated Zero-Maze is a modification of the Elevated Plus-Maze, which incorporates both traditional and novel ethological measures, in the analysis of anxiety. The design comprises an elevated circular platform, with two opposite enclosed quadrants, and two open. This removes any ambiguity in interpretation of time spent on the central square of the traditional "plus" design, and allows uninterrupted exploration.

60190
Elevated
Zero-Maze

CATALOG NUMBER		DIA.	LANE WIDTH	WALL HEIGHT	LEG HEIGHT	PRICE
60190	Zero-Maze, Mouse	50cm	5cm	15cm	40cm	\$1,695.00
60290	Zero-Maze, Rat	100cm	10cm	30cm	40cm	\$2,095.00

Includes adjustable rim similar to the elevated Plus-Maze.

Rat and Mouse Behavior Mazes

60150 Radial 8-Arm Maze

Radial-Arm Maze

The Radial-Arm Maze has been used extensively in evaluating spatial learning and memory. The apparatus consists of eight (or 12) equidistantly-spaced arms radiating from a small, circular central platform. The design ensures that, after checking for food at the end of each arm, the rodent is forced to return to the central platform before making another choice. The subject always has eight (or 12) possible options.

CATALOG NUMBER		LANE	ARM	WALL	PRICE
60150	8-Arm Radial Maze, Mouse	5cm	35cm	9cm	\$1,895.00
60250	8-Arm Radial Maze, Rat	10cm	50cm	13cm	\$1,995.00

T-Maze

The T-Maze is used largely in preference and spatial learning tasks. Animals learn to alternate between arms, based on their memory of the previously visited arms, or choose an arm based on the reward presented. The simple, capital T-shape design incorporates a single choice point with only two alternatives.

60181 T-Maze

Mazes for all your behavior testing needs!

CATALOG NUMBER		LANE	STEM	ARM	ARM	PRICE
60181	T-Maze, Mouse	5cm	35cm	10cm	28cm	\$1,095.00
60281	T-Maze, Rat	10cm	50cm	20cm	40cm	\$1,295.00

Y-Maze

The Y-maze is used to assess exploratory behavior and/or spatial recognition of rodents. Three identical, equidistant arms, designed with gradual turns, promote exploration of the apparatus. Barrier blocks (optional) can be used to employ recognition or reversal paradigms.

CATALOG NUMBER		LANE WIDTH	ARM LENGTH	WALL HEIGHT	PRICE
60180	Y-Maze, Mouse	5cm	35cm	10cm	\$1,095.00
60280	Y-Maze, Rat	10cm	50cm	20cm	\$1,395.00

BARRIER BLOCKS

60180B	Barrier Block Y-maze, Mouse, set of 2	\$70.00
60280B	Barrier Block Y-maze, Rat, set of 2	\$75.00

60180 Y-maze

Parallel Rod Floor Apparatus

ANY-maze Driven

Stoelting's Parallel Rod Foot Fault Apparatus is designed for assessing the effects of drugs, brain damage and disease on motor coordination and fatigue. Tests in up to 16 cages can be performed simultaneously using ANY-maze. This high throughput design makes the test an extremely versatile and valuable screening and phenotyping tool.

Parallel rod Features:

- Easier to use than Rota-Rod
- Provides similar measurements to Rota-Rod testing
- Provides two measurements not necessarily provided by other tests: Number of errors (foot slips) Horizontal distance traveled (cm)

Using the ratio errors per cm traveled to index ataxia provides a robust and unique measure of genetic contributions to locomotor incoordination.

**Compare to Rota-Rod.
Use to assess Ataxia and Motor Coordination.**

61000 Parallel-Rod Floor Apparatus

**ANY-maze
Touch Interface
included!
See page 116**

PARALLEL-ROD FLOOR APPARATUS

61000	Parallel-Rod Floor Apparatus, Single Enclosure System	\$3,995.00
61500	Parallel-Rod Floor Apparatus, Four Enclosure System	\$6,495.00

Stoelting Lickometer

The Stoelting Lickometer for Mouse can be used to measure licking/drinking behavior in mice. An electrical signal is generated from the tongue touching the sipper tube so each lick by the mouse is a recorded event. The Stoelting Lickometer includes the Plexiglas cage and base, controller, and software. This is designed to work with the ANY-maze software, so a computer is required (not included). This Lickometer is designed to be a low-cost measurement of licking/drinking behaviors in mice.

- Easy to use
- Can be combined with other behavior apparatuses, such as Open Field, Y-maze, etc.
- Easy to clean apparatus

ANY-maze Driven

STOELTING LICKOMETER

67100	Stoelting Lickometer System	\$4,995.00
67105	Stoelting Lickometer System with ANY-maze	\$9,995.00
67101	Stoelting Lickometer, water bottle mount	\$495.00

67101 Stoelting Lickometer, water bottle mount

Rat and Mouse Behavior Mazes

60450 Sociability Cage

Sociability Apparatus

Ideal for the investigation of:

- Autism
- Maternal Behavior
- Dominance
- Social Memory
- Sociability

The Sociability Apparatus is used to assess social interaction and conditions thereof. The three-chambered apparatus includes two gray “stranger” enclosures with wide grid bars to promote interaction, and a non-reflective gray floor to maximize contrast, for video tracking purposes.

Rat sizes available.

ANY-maze Driven

SOCIABILITY APPARATUS

60450	Sociability Cage, Mouse	\$2,295.00
60449XL	Sociability Cage, Rat	\$4,095.00

66000 Repeated Acquisition and Performance Chamber

ANY-maze Driven

Repeated Acquisition and Performance Chamber (RAPC)

RAPC is a behavioral monitoring apparatus designed to completely automate and assess spatial learning and memory. RAPC enhances the accuracy of recording temporal measurements, and error scoring, during spatial learning and memory experiments, through the use of the ANY-maze data acquisition software and electronic sensors. In fact RAPC is an ANY-maze software driven product. The software can be used to track as many as 16 chambers simultaneously, and performs full statistical analysis of results immediately upon completion of the experiment.

- Automated data collection results in high throughput and data collection accuracy
- Acrylic construction allows for easy animal observation
- ANY-maze Software control provides ease of operation
- A single personal computer can collect data from up to 16 chambers simultaneously
- ANY-maze software automatically configures the experiments
- ANY-maze controls the experiment flow, data collection and statistical analysis

**Automated
assessment of
spatial learning
and memory!**

STOELTING REPEATED ACQUISITION AND PERFORMANCE CHAMBER (RAPC)

66000	RAPC Repeated Acquisition and Performance Chamber	\$10,995.00
--------------	---	--------------------

60160 Porsolt "Forced Swim" Test

Porsolt "Forced Swim" Test

The Porsolt "Forced Swim" Test is commonly used as a test for depression in rodents. Rodents are subjected to forced swim with no means of escape. The animals learn that escape is impossible and become immobile, moving only to keep their heads above water. Increased immobility is interpreted as depression. The Porsolt cylinder accommodates top-down and side camera positioning for automated detection of immobility behavior with ANY-maze video tracking software.

- Designed for use with Rats and Mice
- Center drain
- Valve for water level adjustment
- Handles for convenient carrying, positioning, emptying and cleaning

CATALOG NUMBER	DIA.	DEPTH	PRICE
60160 Porsolt Test	20cm	45cm	\$695.00

Tail-Suspension Test

- Designed specifically for use with ANY-maze
- Suitable for use with Rats and Mice
- Convenient, removable walls for easy cleaning

The Tail-Suspension Test is akin to the Forced Swim Test, but avoids the problems of hypothermia, and stress associated with forced swimming. Animals are suspended by their tails, and the amount of "immobility" is measured. Longer periods of immobility are associated with higher depressive scores, and immobility can be reversed with antidepressant treatment.

60125 Tail-Suspension Test

CATALOG NUMBER	HEIGHT	STATION WIDTH	OVERALL WIDTH	PRICE
60125 Tail-Suspension Test	54cm	19cm	47cm	\$1,695.00

See page 114 for details.

Mouse Behavior Mazes

63101 Light/Dark Box

Light/Dark Box

The Light/Dark Box is a characteristic tool used in the assessment of anxiety. The basic measure is the animal's preference for dark, enclosed places over bright, exposed places. Time spent in the lit (light) half of the arena, and the related exploratory behaviors, are reliable parameters for assessing anxiolytic effects that may be useful in identifying and/or screening of anxiolytic and anxiogenic agents.

CATALOG NUMBER	OVERALL WIDTH	HEIGHT	TEST CHAMBER DIMENSION	PRICE
63101 Light/Dark Box, Mouse	40cm	35cm	20x40cm	\$895.00

62015 Hole-Board Test

CATALOG NUMBER	ENCLOSURE			TEST CHAMBER HOLE	PRICE
	WIDTH	LENGTH	HEIGHT	DIAMETER	
62015 Hole Test, Mouse	40cm	40cm	35cm	3cm	\$1,595.00

Conditioned Place-Preference Apparatus

The Conditioned Place-Preference (CPP) Apparatus is commonly used in the assessment of the rewarding or aversive properties of drugs or to identify the neuronal basis of reinforcement expression. Typically, the test involves association of an environment with drug effects, followed by the association of a different environment without the administration of drugs. Stoelting's Conditioned Place-Preference Apparatus is comprised of two chambers, barrier block and context kit for altering the environment of each chamber.

64101 Conditioned Place-Preference Apparatus

CATALOG NUMBER	OVERALL WIDTH & HEIGHT	TEST CHAMBER DIM.	START BOX DIM.	PRICE
64101	40cm X 35cm	18 X 20cm	10 X 20cm	\$895.00

Hole-Board Test

Head dipping on a Hole-Board is frequently used as an indicator of exploratory tendencies in rodent studies. Exploratory behavior in the Hole-Board Apparatus is a highly sensitive measure commonly used to explore and determine pharmacological and genetic influences. Additionally, the holes of the Hole-Board Apparatus can be baited, so the test can be utilized in spatial learning and memory experiments.

60100 Open Field

Open Field

The Open Field test is commonly used to assess locomotor activity, exploratory behavior and anxiety in rodents. Open field apparatuses are available with a 40cm square (clear, gray or IR black) or round (clear or gray) enclosure, and gray base plate to maximize contrast, for video tracking.

Novel Object Recognition Test

The Novel Object Recognition Test is based on the premise that rodents will explore a novel object, more than a familiar one, if the animal is able to remember the familiar one. The flexibility of the Novel Object Recognition Test allows for testing of short- or long-term memory, and can be used to selectively test the effects of an acute drug treatment on a specific stage of memory formation.

62017 Novel Object Test

Rat Behavior Mazes

Open Field

The Open Field Test is commonly used to assess locomotor activity and anxiety-related behaviors in rats. The test apparatus includes a 100cm base plate and a 100cm open field enclosure. Open field enclosures are available in clear, opaque black and IR black (for use with photobeam arrays). Optional Quad divider partitions the Open Field Apparatus into four, 50x50cm enclosures.

Conditioned Place-Preference Apparatus

The Conditioned Place-Preference (CPP) Apparatus is used in a wide variety of behavior paradigms. Most commonly it is used in the assessment of the rewarding property of drugs (or other natural reinforcers) or to identify the neuronal basis of reinforcement expression. Typically, a drug is injected, and the animal is placed in a test chamber with distinctive environmental cues.

Each test apparatus includes a 100cm base plate, two sets of place-preference enclosures used for testing two rats simultaneously, barrier block and context kit for altering the environment of each chamber.

Includes two test enclosures for testing two rats simultaneously!

64200 Conditioned Place-Preference (2 Enclosures)

Unique Behavior Mazes

60185 Sleep Disrupter
Water Tank for Mice

Draining
Valve

Stoelting Sleep Disruptor Cage

Stoelting has developed a useful tool for the study of sleeping disorders, REM sleep, and neurodegenerative diseases in mice. The Stoelting Sleep Disruptor Cage produces a stressful environment by utilizing a water environment with 12 individual columns that are just above the water (30mm in diameter), just large enough for a mouse to sit on. But when the mouse goes into REM sleep, the mouse falls into the water. This cage can be used with the ANY-maze Behavioral Tracking Software for video recording and manually scoring other types of behavior.

The following features are available:

- Food hopper and water bottle for studies greater than 24 hours
- Draining valve
- No mechanical parts that can break
- Easy to clean

SLEEP DISRUPTOR CAGE

60185	Sleep Disrupter Water Tank, Mice	\$1,500.00
-------	----------------------------------	------------

A new maze
and animal model
for exploring
autonomic
reflexes.

McCulloch Rat Diving Tank

The McCulloch Diving Tank Maze can be used for measuring autonomic reflexes seen in rats. In response to submersion under water, the reflexly-induced response consists of apnea, bradycardia and an alteration of blood flow that maintains flow to the heart, brain and exercising muscles while limiting flow to viscera and non-exercising muscles.

60139	McCulloch Diving Tank Maze	\$4,495.00
-------	----------------------------	------------

Orofacial Pain Assessment Device (OPAD) for Rats and Mice

The Stoelting OroFacial Pain Assessment Device (OPAD) provides an automated measurement of orofacial pain assessment in the trigeminal nerve in rats and mice via hot or cold or mechanical stimulation. Using an operant behavior conflict paradigm, rodents voluntarily (cognitive-based) decide between receiving a reward or avoiding an aversive stimulus to the orofacial region.

The OPAD begins to work when the animal touches and presses between dual Peltier-controlled temperature elements or mechanical protrusions to obtain a liquid reward. As the temperature (hot or cold) becomes aversive, the animal can withdraw. As for mechanical assessment, the animal's orofacial region will be forced to touch the protrusions to proceed to the liquid reward. The ANY-maze OroFacial Software will automatically track the number of licks, contact with elements (both the Peltier and mechanical protrusions), and amount of liquid consumed.

Features:

- Hot or Cold Temperature Control
- Mechanical stimulation
- Objective Pain Assessment—Easy to use!
- Operant Testing and Measures (not reflexive based)
- High Throughput
- Rackable System
- Up to 16 Cages with a Single Computer
- 4° to 75°C Temperature Range
- Easy to Clean
- Easy USB Connection
- Designed for use with Mice and Rats

Hardware

The OPAD cage for either mice or rats is seated on a metal base that is easily cleaned. A metal rack for rats and mice are enclosed; easily removed and cleaned between animals. Animals are trained and tested in the cage; the reward bottle is positioned to allow access when simultaneously contacting the thermode or mechanical protrusions with its orofacial region. The water bottle is connected to the data acquisition controller for recording each lick, in addition, contact with the thermode or mechanical protrusions will record each touch and duration, finally the amount (grams) of consumption from the reward bottle is also recorded. Each cage is easily attached to computer via USB port.

A New Tool for Hot, Cold or Mechanical Pain Assessment in Rats and Mice. All in a Single Instrument!

Software

All of this data taken from the hardware will then be displayed and analyzed using the ANY-maze OroFacial Software. The software is used to set-up a protocol and will then display and track in real-time the following events: temperature changes and contacts with the thermode or mechanical device, licks and weight of the reward bottle. Following completion of the test, the OroFacial Software will display graphs and statistical analysis of the experiment(s); of course data can be downloaded to other software programs.

Open Field Maze with Backlighting

NEW!

Open Field Apparatus with Backlighting

Stoelting's Backlit base is ideal for video tracking using the ANY-maze Software. The three different light levels, Low- 353 Lux, Medium-1156 Lux, and High-2770 Lux allow for better overall tracking of the body with head tracking behavior being greatly enhanced. Back lighting creates a near perfect contrast between the base and the animal.

Features:

- Perfect for tracking multi-colored animals
- Improves contrast for video tracking
- Three different light levels
- 40cm x 40cm space
- Ideal for Novel Object Recognition testing
- Red light conditions available

OptoDrum
determines
the animal's
visual threshold
automatically.

NEW! OptoDrum: Automated Measurement of the Optomotor Reflex

The OptoDrum experience is fully automated. Place a mouse on the platform inside the arena, and the OptoDrum will present slowly rotating stripe patterns to the animal. Its behavior is monitored by a camera, and our software determines if the animal follows the stripe pattern with its head movement. The stripe pattern will be adjusted over time (made more difficult to be seen, e.g. by lowering the contrast), until the animal no longer shows the reflex-driven behavior. No training is necessary for the animal, and only very limited training is necessary for the user. The OptoDrum is incredibly easy to use, right out of the box.

The following features are available:

- Automated detection of gaze direction with freely moving animals in a non-static illuminated background.
- Automated adjustment of stimulus pattern by software
- Automated behavioral analysis
- No training required for the animal

60441 Ugo Basile Agora Maze

NEW!

Ugo Basile Agora Maze

The Ugo Basile Agora Maze is a new social interaction cage, designed after the SocioBox Method. The main principle is based on free choice by a subject mouse to spend time in any part of an open circular arena attached to 5 cubicles. Ideal for videotracking with ANY-maze!

The apparatus comes complete with central arena and 5 cubicles with blank walls. Detachable clear sliders divide each cubicle, and holes in the clear panels permit the exchange of odors.

UGO BASILE AGORA MAZE

60440	Agora maze, sociability apparatus for mice + ANY-maze Software	\$9,995.00
60441	Agora maze, sociability apparatus for mice, NO Software	\$3,495.00

Waterwheel Forced Swim Test

Ugo Basile's Waterwheel Forced Swim Test is an automated alternative to the Porsolt Forced Swim Test. The Waterwheel Forced Swim Test consists of a water tank with a water wheel positioned across the center. Animals placed in the tank will attempt to escape by climbing on to the wheel, causing it to turn. The number of turns of the wheel provide an objective measure of escape behavior, eliminating the subjectivity of immobility measurements. Rotation encoder and temperature sensor included.

ANY-maze Driven

Use with ANY-maze to automatically score number of rotations and perform statistical analysis.

Main Features:

- Compact and user friendly
- Automate up to 40 tests, simultaneously
- Eliminates subjectivity of immobility measurement
- Connects to ANY-maze for automated scoring and completed data analysis
- Continuous water temperature feedback

Thermal Gradient Ring

NEW!

Ugo Basile Thermal Gradient Ring (TGR)

Introducing the Ugo Basile Thermal Gradient Ring (TGR) for mice, a novel device for the analysis of comprehensive thermal preference phenotyping. The TGR consists of a circular track that creates a temperature gradient between two set temperature extremes. The mouse is able to freely move across each zone while ANY-maze records and analyzes the preference behavior.

Main Features

- Thermal Insulated Aluminum Ring (runway ID 45cm, OD 57cm)
- Two heating devices to establish symmetric gradient
- Circular design guarantees bias-free, reproducible data—no spatial cues or border effects
- Creates 12 zones per side ($\Delta \approx 2.3^\circ\text{C}$ between each zone)
- Includes B/W USB camera and set of 4 dual (visible/I.R.) lights
- Thermal Gradient Ring Mode in ANY-maze for easy protocol set up

Video recording and analysis is performed through ANY-maze Video Tracking Software. The TGR simply connects to your computer via USB and is recognized as an I/O device in ANY-maze. The temperature of all 12 zones is monitored in real time through ANY-maze by the 4 thermocouples embedded in the TGR. Data output includes: preference temperature, time spent in each zone, and percent of time spent above the given temperature.

Ugo Basile Combination Hot/Cold Plate Analgesia Instrument

The Ugo Basile Hot/Cold Plate is used to test thermal pain response in mice and rats. Two working modes allow for testing at a fixed or increasing/decreasing temperature (RAMP). All settings programmed with the easy to use touch screen controller.

Features:

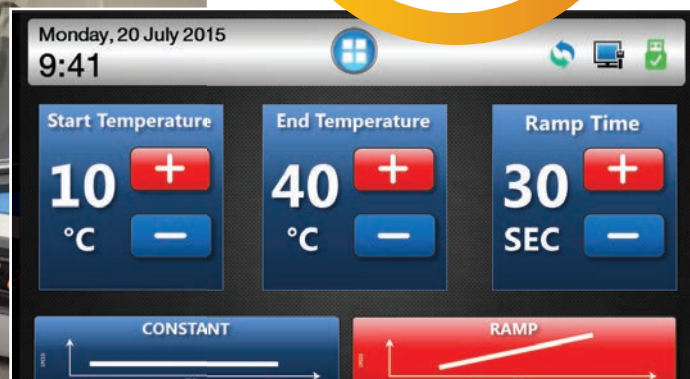

- OPERATING TEMPERATURE: -5.0°C to 65.0°C in steps of 0.1°C , with a precision of 0.5°C
- OPERATING MODES: fixed or ramping temperature
- X-PAD SOFTWARE included
- DATA PORTABILITY: via the USB Memory-Key, included

55370 Plantar Analgesia Instrument

Ugo Basile Thermal Plantar Analgesia Instrument

Measures paw sensitivity to heat stimulation

The Ugo Basile Plantar Analgesia Instrument is an advance in methodology for assessing pain sensitivity in laboratory animals.

The instrument comes complete with the sliding infrared source; a glass platform; multiple configuration animal enclosure; a controller, and a manual. The Multiple Configuration Animal Enclosure is appropriate for Mice and Rats and provides maximum flexibility.

Use Durham Animal Restrainers for orofacial stimulation.

57215 Ugo Basile Paw Pressure Analgesia Instrument

Ugo Basile Paw Pressure Analgesia Instrument

The Paw Pressure Analgesia Instrument is for the Randall-Selitto Test, which requires the application of increasing pressure on the paw between a flat surface and a blunt pointer. It is usually used with animals with one paw inflamed, and one untreated paw, to evaluate drugs for analgesic action.

UGO BASILE PAW PRESSURE ANALGESIA INSTRUMENT

57215	Ugo Basile Paw Pressure Analgesia Instrument	\$3,295.00
57222	Ugo Basile Paw Pressure Analgesia Instrument, Recording	\$5,395.00
57206	Ugo Basile Extra Disc Weight	\$35.00

Ugo Basile Tail-Flick Analgesia Instrument

The Ugo Basile Tail Flick Instrument is used to automatically assess thermal nociceptive threshold in mice and rats. An infrared heat stimulus is focused on the animal tail and reaction time (time to flick) is automatically recorded. An optional Tilted Mouse Restrainer (57369) is necessary to keep the mouse tail on the emitter until stimulated.

UGO BASILE TAIL FLICK ANALGESIA INSTRUMENT

57360	Ugo Basile Analgesia Instrument, Tail Flick	\$5,695.00
57369	Tilted Mouse Restrainer	\$505.00
57390	Heat-Flux Radiometer	\$2,295.00

For **precise calibration** of infrared analgesia meters. To calibrate the I.R. emission of Ugo Basile Plantar Test (144) and Tail-Flick.

Ugo Basile Grip Strength Meter

The Ugo Basile Grip Strength Meter automatically measures fore- and hindlimb grip strength in mice and rats. Peak pull force achieved by the limb is automatically measured and displayed. Each instrument includes control unit, base plate with grasping bar, and software used for comparing pulling force with desired target force rate.

UGO BASILE GRIP STRENGTH METER

57107	Ugo Basile Grip Strength Meter	\$3,995.00
--------------	--------------------------------	-------------------

Ugo Basile Rota-Rod

Ugo Basile Rota-Rod

Ugo Basile designed the first Rota Rod in the 1960s and with thousands of scientific references, is considered the industry leader in Rota Rod technology. The next generation Rota Rod from Ugo Basile combines the same functionality of the original Rota-Rod with additional new features:

- Silent Operation
- Stainless Steel Trip Plate for Easy Cleaning
- Touch Screen Display for Programming Experimental Parameters and Data Collection

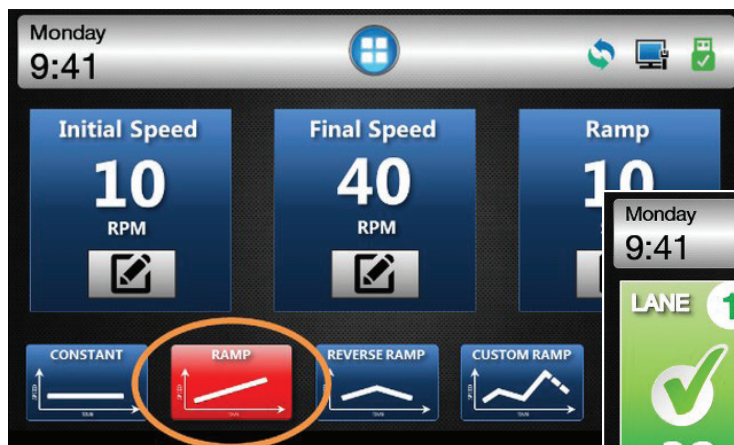

Mouse Rota Rod consists of five rotating cylinders and allows for testing five mice, simultaneously. Height to fall is 16cm. Rat Rota Rod consists of four rotating cylinders and allows for testing four rats, simultaneously. Height to fall is 30cm.

Settings

- Speed: 5-80 RPM, in steps of 1RPM
- Mode: Constant speed, ramp (accelerating) and multi-step ramp
- Rotation: Forward, reverse and rocking

For another method, see page 127 for Stoelting's Parallel Rod!

Zero Noise!
XPAD Software
Included.

UGO BASILE ROTA-ROD

57624	Ugo Basile Rota-Rod for Mice	\$5,995.00
57625	Ugo Basile Rota-Rod for Rats	\$6,995.00
57626	Ugo Basile Rota-Rod for Rat and Mouse	\$11,495.00

Ugo Basile Activity Wheel

The Ugo Basile Activity Wheel is used to monitor daily activity in mice and rats. The stainless steel wheel is housed in a clear polycarbonate cage with stainless steel wire lid to accommodate food and water for circadian studies. Each running wheel is equipped with a magnetic switch and LCD counter to record number of revolutions. Running wheel cages without magnetic switch and LCD counter are also available.

The Rat Cage measures 48(h)x32(w)x47(d) cm with a wheel diameter of 35cm. Wheel bars are 2mm and spaced 8.8mm apart. The Mouse Cage measures 37(h)x26(w)x38(d) cm with a wheel diameter of 25 cm. Wheel bars are 2mm and spaced 7mm apart.

UGO BASILE ACTIVITY WHEEL

57434	Activity Wheel for Rat, with Counter	\$1,695.00
57435	Activity Wheel for Rat, without Counter	\$1,295.00
57436	Activity Wheel for Mouse, with Counter	\$1,595.00
57437	Activity Wheel for Mouse, without Counter	\$1,195.00

Ugo Basile Rotometer for Mice

Measures Rotational Behavior in Untethered Mice

The Ugo Basile Rotometer is widely used to assess rotational behavior commonly associated with:

- Differential expression of neurotransmitter levels (such as GABA or dopamine).
- Developmental anomalies
- Anxiety/stress
- Drug exposure, drug abuse or withdrawal
- Lesioning, traumatic brain injury or spinal cord damage

Encapsulated magnets taped to the mouse tail, surgically implanted or injected subcutaneously, are used to automatically count clockwise and counterclockwise rotations. As clockwise and counterclockwise rotations accrue, they are displayed on the front panel of the Rotometer and stored in the internal memory of the instrument. Each Rotometer includes an cylinder animal restrainer and four magnets (2 ea. 2x12mm and 2x15mm).

UGO BASILE ROTOMETER FOR MICE

Ugo Basile Multi-Maze System

Automate with
ANY-maze!
See page 114.
Smooth, silent
operation.

Ugo Basile Multi-Maze System

The Ugo Basile Multi-Maze for Mice is a modular system providing complete automation of spatial memory experiments including: Y-maze, T-maze and 8-arm Radial Arm Maze.

Use the Ugo Basile Multi-Maze to:

- Assess spatial memory
- Test basic working memory
- Discriminate working from reference memory
- Evaluate impairments in the working memory

Proprietary sliding doors retract into the maze floor smoothly and silently without disrupting the animal during testing. This sliding mechanism combined with the non-reflective, high contrast maze material provides optimal results with ANY-maze Video Tracking Software (sold separately as Product Number 60000, see page 114).

MULTI-MAZE SYSTEM

67503	Ugo Basile 3-arm Standard Multi-Maze (Y-maze), Mouse	\$12,595.00
67504	Ugo Basile 3-arm Multi-Maze with Automated Start Compartment (Y- and T-mazes), Mouse	\$15,195.00
67505	Ugo Basile 8-arm Multi-Maze (Radial Arm and Y-mazes), Mouse	\$24,895.00
67506	Ugo Basile 3-arm Standard Multi-Maze (Y-maze), Rat	\$13,995.00
67507	Ugo Basile 3-arm Multi-Maze with Automated Start Compartment (Y- and T-mazes), Rat	\$16,995.00
67508	Ugo Basile 8-arm Multi-Maze (Radial Arm and Y-mazes), Rat	\$28,295.00

Ugo Basile Treadmill for Mice and Rats

Introducing Ugo Basile's Next Generation of Rodent Treadmills. Compact and user-friendly, the NEW Ugo Basile Treadmill can be used for both rats and mice. Experimental parameters are programmed into easy-to-use touch screen display. Endurance, distance (absolute and relative) and speed are automatically measured and recorded.

Features:

- Speed: from 3 to 100m/min, in steps of 1m/min amps
- Slope: positive (uphill) or negative (downhill), from -25 to +25°, in 5° steps
- Shock: from 0-2mA (in 0.1mA steps), included
- Modes: constant, accelerating, custom ramps

UGO BASILE TREADMIL FOR MICE AND RATS

57630	Ugo Basile Treadmil for Mice and Rats	\$11,695.00
57631	Ugo Basile Treadmil, Mouse	\$11,295.00

Intra/Extra-Dimensional (ID-ED) Attentional Set-Shift

NEW!

Ugo Basile Operon ANY-maze Driven

The Ugo Basile Operon is the ultimate intra/extra-dimensional (ID-ED) attentional set-shifting task for mice. This novel ID/ED Operon task is an effective preclinical tool for studying the executive dysfunctions and cognitive symptoms of psychiatric disorders. A dedicated version of ANY-maze software automatically manages all the Operon tools following a precompiled protocol and collects the data.

Features:

- Automated tridimensional stimulation (visual, odor, and texture)
- Two compartments each with an operant wall with lights, odor delivery, and revolving door
- Odor delivery system (66510) includes 2 channels and 10 independent flow meters
- Left and right nose pokes and pellet dispenser in each compartment
- Fully automated system through ANY-maze Video Tracking Software—includes precompiled protocol!

UGO BASILE OPERON

66500	Ugo Basile OPERON	\$30,295.00
66510	Ugo Basile OI factory System for OPERON	\$25,295.00

ANY-maze/Ugo Basile Fear Conditioning System

**Includes
domestic training
and installation!***

*If you are outside the U.S. or Canada,
please contact Stoelting for pricing
and installation details.

ANY-maze/Ugo Basile Fear Conditioning System

The ANY-maze/Ugo Basile Fear Conditioning System is a state-of-the-art system for accurately detecting immobility, a behavior commonly associated with fear. The new design utilizes an on-board controller, allowing full atomization of all variables (sound, shock, and light) through ANY-maze.

The system employs ANY-maze Fear Conditioning Software to conduct contextual and auditory-cued fear conditioning paradigms and automate analysis of:

- Total freezing time
- Number of freezing episodes
- Duration of freezing episodes
- Latency between stimuli and freezing event

The system includes the following:

- ANY-maze Fear Conditioning Software
- New, on-board controller
- Shock-100Hz-40KHz; 1-150dB or white noise
- Sound-Constant Current 0.1-2.9mA in 0.1mA steps

- Dual visible/I.R. light
- Camera and Camera Lens
- Animal Enclosure with Electrified-Grid Floor
- Sound-Attenuating Chamber
- Context Kit to Alter Enclosure Environment

Power

Designed for inducing convulsions.

Ugo Basile Electroconvulsive Device

The Basile Electroconvulsive Device is designed for inducing convulsions in research animals. Consistent, reproducible current levels are produced by feedback circuitry that adjust for variance in impedance of the contact from animal to animal.

The impedance to the animal can be pre-measured and displayed, and a warning signal flashes if the impedance is too great to deliver the desired current level. The Electroconvulsive Device is supplied with auricular (ear lobe) electrodes.

UGO BASILE ELECTROCONVULSIVE DEVICE

57800	Basile Electroconvulsive Device	\$6,495.00
57802	Auricular Electrodes (included)	\$495.00
57803	Corneal Electrodes, optional	\$695.00
57805	Foot Pedal, optional	\$495.00
57808	Biphasic Unit, optional	\$3,525.00

If your main power supply is 220V, add a "V" to the product number.

Ugo Basile Lesion-Making Device

This compact, solid state direct current (DC) Lesion Maker has been designed for the production of localized lesions in small animals. The current generator is protected against short circuit, which prevents the electronics from getting damaged when the electrodes accidentally come into contact with each other.

The Basile Lesion Making Device provides constant DC current in mA from 10 to 99.99 mA. The pulse duration may be timed by the instrument between 1 and 99 seconds, or manually controlled.

A yellow LED warns when the impedance is too high for the preset current. The current generator is protected against accidental short circuit of the output. Maximum electrode resistance is 20 M Ω (10 μ A) down to 2 K Ω (100mA) and Compliance Voltage is from 1-99V.

53500 Ugo Basile Lesion-Making Device

Comes complete with set of three output plugs.

If your main power supply is 220V, add a "V" to the product number.

Startle-Response Laboratory (SR-LAB™) System

The Startle-Response Laboratory (SR-LAB) System is the world's most widely-used startle-reflex behavioral research system, and the most successful for measuring Startle Habituation, Pre-Pulse Inhibition (PPI) and Fear Potentiated Startle (FPS).

Execute any-and all-startle-reflex testing paradigms using the SR-LAB Software and specialized additional kits.

The SR-LAB basic system includes:

- Test cabinet made of composite ABS plastic
- Animal enclosure in choice of standard sizes
- Power supply
- Input and Output cables
- Animal enclosure base
- Software and User Manual
- Software utilities for data analysis

Please specify Animal Enclosure upon ordering:

- Small Animal Enclosure-10-25g
- Small/Medium Animal Enclosure-25-50g
- Medium Animal Enclosure-50-150g
- Large Animal Enclosure-150-450g
- X-Large Animal Enclosure-450-800g

The world's most widely used startle-response system!

Run a wide range of avoidance tests with Gemini's flexible hardware and software!

Gemini Active and Passive Avoidance System

The GEMINI Active and Passive Avoidance System was designed specifically to test active and passive avoidance in rats and mice. Available in two configurations, shock or shock and air puff, GEMINI's unique design allows you to run up to 8 independently-operated stations directly from your laptop! The GEMINI animal shocker scrambles the shock across the grid floor, preventing the animal from determining a pattern, leading to more accurate responses.

Grip Strength, Pain & Inflammation

Touch Test™ Sensory Evaluator

The Semmes-Weinstein von Frey Aesthesiometer is used for clinical and preclinical assessment and diagnosis of hyper- or hypoesthesia.

The Touch Test Sensory Evaluator Kit features:

- Set of 20 Nylon Monofilaments
- Force Range 0.008-300g
- Retractable Mechanism to Protect Filament

The Semmes-Weinstein monofilaments provide an approximate logarithmic scale of actual force and a linear scale of perceived intensity. Rodents exhibit a paw withdrawal reflex when the paw is unexpectedly touched. The Touch Test Sensory Evaluator can be used on plantar surfaces of the mouse or rat paw. The animal indicates sensation by pulling back its paw. Kit includes set of 20 retractable monofilaments and protective case. Optional base assembly includes perforated metal base with stand and multi-configuration animal enclosures. Individual filaments also available for purchase.

18020 JVP Domes Complete Set

JVP Domes

The JVP Domes are the most sensitive method of measuring human tactile spatial resolution.

The set includes 8 acrylic probes with bar/groove widths measuring 0.35, 0.5, 0.75, 1.0, 1.25, 1.5, 2.0 and 3.0mm. Each probe has a columnar handle and

a dome shaped head. The head has an alternating ridge/slot pattern of different width for each probe. The ridged head is pressed against the skin, and the patient/subject must report the alignment of the ridges, longitudinal or transverse. An extensive bibliography is available, including normative data on various body surfaces. Set comes with an illustrated manual with several citations.

JVP DOMES

19117 Smedley Hand Dynamometer

Smedley Hand Dynamometer

Grip strength measurement

The Smedley Hand Dynamometer is a hand-held instrument for measuring grip strength, fatigue rate and recovery rate.

The handle adjusts to fit the grip length of the hand. The Smedley Hand Dynamometer measures grip

strength up to 100 kilograms, in 500 gram graduations. Two dial hands move up together, but one “freezes” at the maximum grip achieved, while the other follows the grip up or down to show the current squeeze strength.

SMEDLEY HAND DYNAMOMETER

19117	Smedley Hand Dynamometer	\$450.00
19118	MRI-Compatible Hand Dynamometer	\$1,795.00

NEW VERSION! Automated Scratch Counting for Mice

The real-time, long-term, quick, and accurate quantification of scratching behavior in mice

Scratching behavior is a critical biomarker for many laboratories, and important for drug development. Quantification of scratching behavior manually is subjective. The novel Automated Scratch Counting Instrument for Mice calculates frame-to-frame differences by capturing the animals' behavior with image processing software.

The high-speed camera contains an image-processing system enabling real-time quantification of scratching behavior of mice. Records and analyzes scratching behavior continuously for up to 24 hours.

The recording platform has a built-in infrared light panel. Records scratching behavior, in a natural state, using the invisible near-infrared light. This system allows evaluating of scratching behavior not only in regular light but also in the darkness.

SCRATCH COUNTING FOR LABORATORY ANIMAL-REAL TIME

55600	Automated Scratch Counting, Mice	\$83,995.00
--------------	----------------------------------	--------------------

Output Data:

- Number of scratching behaviors
- Duration of scratching behavior
- Graphical representation of scratching behavior
- Test up to 4 mice at one time

Nano Tag

Continuously record activity and temperature for up to 60 days with nano tag. Smaller than the size of a dime, nano tag is an implantable single-use recording device for mice. The nano tag's internal three-axis accelerometer and temperature sensor automatically collects and stores activity and temperature data. Data from animals housed in the same cage can be collected simultaneously!

Software is required.

Features:

- Three Recording Modes: Loop, Memory and Timer
- Small and Lightweight
- Record from Multiple Animals Simultaneously

NANO TAG

56745	NanoTag for Mice and Rats (5/pk)	\$1,695.00
56745S	NanoTag Viewer Software	\$4,495.00

Electrophysiology

HRP in tris buffer, pH 8.6; rat; lateral habenula. 2µA pulsed current, 15 minutes, 12 µ pipette.

Tritiated prolineleucine. VM nucleus, thalamus. 1µA pulsed current, 10 minutes, 20 µ pipette.

NEW LOOK!

Digital Midgard™ Precision Current Source

- Touch screen programmability
- Universal power supply
- Internal memory
- Integral high-voltage labels
- Real-time feedback of current status
- Error warning for current interrupt
- Error warning for out-of-range

For Iontophoresis

The latest generation of the popular precision current source, designed at M.I.T. for the iontophoresis of neural transport tracers such as horseradish peroxidase (HRP) or tritiated amino acids into neural tissue, is now available from Stoelting. It may also be used to make small lesions, and in applications requiring precise current control through high impedance.

Compliance Voltage

The Midgard™ features a high compliance voltage (3000 V) for injections from very small, or partially-clogged, pipette tips. The output current level can be regulated to +/- 0.5%, from 0.0 to 200 MegOhms.

Pulsed or Continuous Output

Pulsed output helps avoid clogging or polarization of the tip of the pipette. The researcher may select pulsed or continuous current with a switch. The pulsed on/off times can be varied from 0.5 to 24 seconds.

51599 Digital Midgard™
Precision Current Source 2.0

A touchpad switch allows reversing polarity. This is useful when using a retaining current to hold the pipette contents in the pipette during entry into the brain.

SPECIFICATIONS

OUTPUT

Output current:	2–25 µA, set by touch pads
Compliance voltage:	3000 V
Load current accuracy:	0.5% at 0-200 MegOhms
Load current reproducibility:	0.25%
Polarity:	Positive or negative, user selected
Display resolution:	0.01 µA
Output connectors:	Two integral H.V. Cables

PULSED MODE OPERATION

Pulse duration:	0.5 to 24 seconds, variable
Duty cycle:	Preset to 7 sec. on / 7 sec. off
Timing error:	± 5%
Load current fall time:	0.1 sec.
Load current rise time:	Dependent on load resistance. For 7.0 mA through 200 MegOhms, rise time to 99% of set value is 1 sec.; over-shoot less than 5%.

MIDGARD™ PRECISION CURRENT SOURCE

51599	Digital Midgard™ Precision Current Source 2.0	\$3,495.00

Laboratory Animal Ear Tags

- Ear tags are numbered from 1-100 (available up to 999)
- Available in 5 colors (1.Red 2.Green 3.Blue 4. Light Blue 5.Black)
- Once applied, they cannot be easily removed
- Laser-etched number provides durability
- Custom numbering available (contact for details)
- Easy-to-read
- Corrosion resistant

Small Animal Ear Tags are specially suited for use with small lab and research animals (mice, rats and other rodents). The lightweight easy-to-read tags allow for trouble-free identification.

Ear Tag Applicator (sold separately) is required for application. Please specify number sequence when ordering.

LABORATORY ANIMAL EAR TAGS (SHEET OF 100)

FOR MOUSE

56779	Ear Tag, Mouse, 5 Colors	\$200.00
56780	Ear Tag, Mouse, Red	\$200.00
56781	Ear Tag, Mouse, Green	\$200.00
56782	Ear Tag, Mouse, Blue	\$200.00
56783	Ear Tag, Mouse, Light Blue	\$200.00
56784	Ear Tag, Mouse, Black	\$200.00

FOR RAT

56785	Ear Tag, Rat, 5 Colors (20 each)	\$200.00
56786	Ear Tag, Rat, Red (Box of 100)	\$200.00
56787	Ear Tag, Rat, Green (Box of 100)	\$200.00

56790	Ear Tag, Rat, Black (Box of 100)	\$200.00
56791	Ear Tag Applicator	\$595.00

Please specify number sequence when ordering.

Ear Punch

Ear punches used for notching or punching mouse or rat ears at weaning for easy identification. The 56718 and 56719 have ergonomic handles for easy control. All punches are made of Stainless Steel. Instruments are for non-clinical use only (not for human use).

EAR PUNCH

56719	Ear Punch, 2mm hole, 4in	\$45.00
56717	Thumb Print Ear Punch, 2mm hole, 2in	\$15.00
56718	Ear Punch, 1mm hole, 4in	\$45.00

Animal Identification

Animal Markers

The Animal Marker was developed for easy, long-lasting identification of laboratory animals. Unlike permanent markers and art markers, which can contain chemicals harmful to animals, Animal Marker use “legal pigments,” which are approved and regulated by the Japanese Ministry of Health, Labor and Welfare, for use in food, drugs and cosmetics. These pigments are nontoxic and devoid of any hazardous materials. For use on the rodent’s coat. Color will not remain on the animal’s skin.

Features:

- Nontoxic and devoid of any hazardous materials
- A single marker can be used to mark 300-500 rats (depending upon animal size and/or applied area)
- Once applied, colors remain for 6-12 weeks
- Standard and fine tip markers available

ANIMAL MARKERS

Standard Tip Animal Markers

NEW! Vaginal Estrous Cycle Monitor

- The best method of determining proestrus stage
- Powerful tool for the improvement of reproduction efficiency
- Simple operation
- Battery operated

Does not affect reproduction or pregnancy rates.

The Rat Vaginal Impedance Monitor is designed to obtain precise information to determine the optimum day for mating during the rat estrous cycle.

The conventional method (vaginal smear method) is a troublesome procedure requiring skill, time and labor.

The electrical impedance of the epithelial cell layer of vaginal mucosa is measured at the frequency of 1 kHz by insertion of the probe into the vagina. In the proestrus stage significantly higher impedance is produced compared to that in the other stages of the estrous cycle. 3 kohm of impedance can be considered a standard for indicating proestrus stage. Measuring range is 0-19.9kohm.

The Rat Vaginal Impedance Monitor is a reliable time and labor-saving device. Operation is so simple a novice can easily use it.

Important Notice: The 59160 was developed exclusively for Rats. A Mouse probe is available, but test results can not be guaranteed.

SPECIFICATIONS

Range	0-19.9 kohm
Accuracy	+/- 1% +/- 1 digit
Display	LCD
Battery	4 Rechargeable Battery (Ni-MH) / 30 hr Battery Life
Dimensions	90W x 135D x 35mmH
Weight	Approximately 200g (battery excluded)

VAGINAL ESTROUS CYCLE MONITOR

59160	Electronic Vaginal Estrous Cycle Monitor, Rat	\$2,495.00
59161	Mouse Probe (50mm x 3.5mm O.D.)	\$375.00
59162	Replacement Rat Probe (55mm x 4.5mm O.D.)	\$375.00

Miscellaneous (Really Cool Stuff)

59150
Automated Milker,
Rat and Mouse

Automated Milker for Rat and Mouse

- Ideal for the analysis of breast milk composition

The Automated Milker provides researchers the ability to collect Rat/ Mouse milk directly from the teat. The Milker collects milk from lactating mothers by alternating negative and atmospheric pressures through two solenoid valves and a vacuum pump attached to a microcomputer.

Environmental pollutants, in particular carcinogenic substances and endocrine disrupting chemicals, are a worldwide concern. The influence that these substances have on babies and their development, through breast or cow milk, is of great concern. The ability to gather milk from Rats and Mice, widely used experimental animals, will aid in advancement of research in this area.

AUTOMATED MILKER FOR RAT AND MOUSE

59150	Automated Milker, Rat and Mouse	\$14,995.00
