Notice Regarding Leiter-3 Scoring Software Assistant

We recently identified a scoring error in the Leiter-3 Scoring Software Assistant program affecting calculation of the Nonverbal Memory Composite Growth Score.

The software is currently calculating this growth score using the sum of scaled scores. However, according to the Leiter-3 scoring procedures, the sum of raw scores must be used to derive the correct Nonverbal Memory Composite Growth Score. As a result, growth scores generated by the software for this composite may be inaccurate.

What you should do:

Until a software update is released, please refer to the Leiter-3 Examiner's Manual and calculate the Nonverbal Memory Composite Growth Score manually using the **sum of raw scores** and the growth score conversion tables in Appendix G.2.

All other scores and composites in the software remain unaffected.

What will happen next:

We are actively working to correct this issue and will post an update as soon as a revised version of the software is available.

We sincerely apologize for any inconvenience this may cause and appreciate your patience and understanding. If you have questions, please contact us at psychtests@stoeltingco.com.

Sincerely,

Stephanie Kohlman, PsyD
